O TO THE TO THE TOTAL OF THE TO

ANNUAL CATALOGUE

... OF ...

BEST GRADE SEEDS

Agricultural and Horticultural Implements.

HIS YEAR WILL complete our **Half Century** in the Agricultural Business.

To our old and the many new customers, and friends, who are pleased to favor us by trade, we extend our sincere thanks and wish them a prosperous year, with bountiful crops and good financial returns for same.

It has always been our aim to send out only first-class seeds; we have always believed New-England-grown seeds to be preferable for this section of the country, and have always followed this belief by procuring stocks of all varieties that can be grown to advantage here.

We would make especial mention here of **Sweet Corn**; in spite of the enormous quantities grown and shipped from the west, it is the opinion of almost every farmer and gardener in this vicinity that **New-England-**grown stock is of much better quality and retains its natural sweetness for a much longer time. **We positively guarantee** all our **Sweet Corn** to be New-England-grown.

Agricultural Implements—This is an important department in our business; we have the largest and most varied stock in New England, and would be pleased at any time to show and explain to you any of the modern improvements.

DISCOUNTS.

For Cash we discount as follows:

Seeds in packets, any amount above \$1.00, 25 per cent. Seeds in bulk, ozs., 1-4 lbs. and upwards, pints, qts. and bus., amounts from \$5 to \$10, 5 per cent.—\$10 to \$20, 8 per cent.—\$20 to \$40, 10 per cent.—over \$40, 12 1-2 per cent. The above does not apply to Grass and Clover Seeds, Onion Sets or Potatoes.

We send by mail, postage paid, all seeds ordered at ounce and packet prices.

Please notice. In this issue we offer Collections of Vegetable Seeds for the Kitchen garden, these collections are put up in three sizes, and sold at reasonable price. The varieties are carefully selected as best adapted to this section, to obtain the best results, and the quantities are the right proportion for the average family garden.

If in doubt as to varieties and quantities, try one of these assortments. We solicit your orders, and will give the same our most careful attention. Remember we make no charge for cartage. Bags only charged at cost. All Vegetable Seeds in packets at the uniform price of five cents each.

W. E. BARRETT & CO.

ASPARAGUS. (Spargel.)

Sow in the seed-bed late in the fall, or early in the spring, in drills one foot apart. The roots may be removed when one or two years old. No pains should be spared in preparing your bed. Select a good rich, mellow soil, and trench the ground two feet deep, using a liberal quantity of manure—with a small mixture of common salt—which will be found to be very beneficial.

Barr's Mammoth—Two years old, per hundred			1 00

BEANS, DWARF OR BUSH. (Busch-Bohnen.)

These succeed well in almost any well-worked soil. Plant when the weather has become warm, in drills two to three feet apart, acording to the richness of the soil. Cover the seed about two inches. For succession, plant every two weeks, from the first of May till August. Hoe often, but never when the vines are wet, as the pods would become discolored. One quart of seed is sufficient for one hundred feet of drill; two bushels for one acre in drills.

BEANS, POLE or RUNNING.

These are more tender than the dwarf beans, and planting should be delayed about a week longer. Lima and Sieva Beans are not usually planted till the first of June. The soil should be thoroughly enriched with fine manure, and the beans planted in hills about four feet apart. Set a stout stake about eight feet long, firmly in the centre of each hill, leaving four plants to a hill. One quart of seed will plant about one hundred and fifty hills; ten to twelve quarts to one acre.

BEET. (Runkel Rube.)

One ounce will sow fifty feet of drill; five to six pounds to an acre. The soil best suited for Beet culture is that which is rather light and well enriched. Sow in drills one foot apart and one inch deep, as early as the ground can be worked; when the plants are large enough thin out to stand six inches apart in rows; continue for a succession as late as the middle of July. Keep well cultivated. To preserve Beets during the winter select a dry piece of ground and put about twenty bushels in a pile, covering with sufficient earth to keep out the frost.

TABLE VARIETIES.

	Lb.	¼ Lb.	Oz,
Crosby's Egyptian—This variety is as early as the original Egyptian			
but by careful selection has been made thicker, and of better quality.			
For early use, either for market or for family gardens, this variety			
easily takes the lead. It is very popular among market gardeners.	\$ 80	25	10
Carter's Excelsior—New, very early	80	25	10
Arlington Favorite—A variety closely resembling the Dewing's as			
originally introduced, of medium size and dark, rich color, of excel-			
lent quality, and does not become coarse and stringy when a little			
old, as do many varieties	60	20	10
Mitchell's Perfected Dark Red-A new, extra early Turnip beet;			
very smooth, dark red	60	20	10
Lentz Extra Early—A large, small top, round beet; fine strain	60	20	10
Eclipse—Very early, dark red, much used for first crop	60	20	10
Early Egyptian-We recommend this as one of the best early table

BORECOLE, OR KALE. (Blatter Kohl.)

Borecole belongs to the cabbage family, and requires similar treatment.

Dwarf Curled Scotch—Very fine strain, much used	\$1 00	35	15
Sea—Resembles Celery in flavor	2 50	75	25

BROCOLI. (Spargel Kohl.)

Produces heads in the autumn like Cauliflower, but more hardy. The cape varieties we offer are best adapted to our climate. Sow about the middle of May, transplant in well enriched soil, and manage the same as winter cabbage. For an early crop the seed should be sown in a hot-bed and cultivated as early cauliflower. It succeeds best in moist soil and gool climate, and in the South it can be had in perfection from November to March.

		Lb.	¼Lb.	Oz.
Early	Purple Cape—Large and compact	\$3 50	I 00	30

BRUSSELS SPROUTS. (Sprossen Kohl.)

Produces from the stem small heads, resembling miniature cabbage. The sprouts are used as greens, and become very tender when touched by the frost. Sow in May, and manage the same as winter cabbage.

Lb. ¼ Lb. Oz.
Improved Dwarf—Producing compact sprouts of extra fine quality. \$2 00 65 25

CABBAGE. (Kopf Kohl.)

The cabbage in its wild state is a native of Europe. It has been brought to its present high state of perfection after years of careful selection under cultivation, and we are indebted to some of our local market gardeners for some of the most reliable heading varieties yet introduced.

CULTURE.—For very early use, sow in January or February in hot beds; prick out when plants are strong enough into other hot-beds; or sow in cold frames in March, transplant when danger from killing frosts is passed, to the open ground, in rows two feet apart and eighteen inches in the row. For a succession, sow in the open ground the last of March or early in April. Plants which have been sown early in the fall and wintered over in cold frames are usually set out from the middle of March to the middle of April, in rows about two feet apart and eighteen inches in the row. The autumn and winter varieties sow in April or early in May, in shallow drills, three or five inches apart; transplant early in July, in row two and one half feet apart, and two feet in a row. Cabbage succeeds best in a fresh,

rich soil, well manured and deeply dug or ploughed. The late plants are subject to the attacks of the cabbage-fly, which destroys them as fast as they appear above ground. To preserve the plants, sprinkle them with wood ashes, air-slacked lime, plaster, slug-shot or tobacco dust, early in the morning while the plants are wet with dew. One ounce of seed produces about thirty-five hundred plants.

Stone Mason—A standard variety for market	2 00	65	25
Imp. Red Dutch Drumhead-Best variety for pickling	2 00	65	25

CARROT. (Mochre.)

The best soil for carrots is a sandy loam, which has been well manured for previous crops. For an early crop sow as soon as the ground can be worked in the spring. For a late crop, sow in June or July. Plant in drills about twelve inches apart, and three to four inches in a row.

	Lb.	¼ Lb.	Oz.
Chantenay Half-Long—Resembling the Nantes,			
with larger shoulders and more productive	\$ 80	. 25	10
Guerande, or Oxheart—This is a desirable variety			
on soils too hard and stiff for the longer-growing			
sorts, as it is not over five or six inches long. It fre-			
quently grows as thick as long, thus making it really			
as large as the longer sorts, and can be easily pulled			
by hand	80	25	10

fine flavor	80	25	10
Long Orange—A standard field carrot (for stock)	80	25	10
Danvers—A new variety, between the Long Orange		5	
and Short Horn class, grows very smooth and solid;			
in color is dark rich orange	I 00	30	10
Long White Belgian-Largest of all, while very productive	50	20	10

CAULIFLOWER. (Blumen Kohl.)

Culture the same as for cabbage, except that extra manure and plenty of water will pay upon this. If the soil be dry, water frequently, and if the plants could have a heavy mulch of hay or straw, it would keep the soil moist, and the plants would not suffer from drought. The early kinds should be strong enough to plant out not later than the middle of April; the late kinds may be planted out the same time as for cabbage. To destroy the Cauliflower maggot, it is recommended to take one ounce of sulphurate of potassium and dissolve it in one gallon of water. Heat the liquid to about 100°, take a large spoon or something that will hold 100th part of a gallon, and pour the liquid against the stalk of the plant just above the ground.

SWEET CORN. (Welschkorn.)

ALL GROWN IN NEW ENGLAND.

It is our opinion, after several years of testing, side by side, that Eastern-grown Sweet Corn is far superior to Western in sweetness, and also retains this necessary quality for much longer time. This is also the opinion of many of our local market gardeners. Our entire stock for this season we guarantee to be New England grown.

All varieties of Sweet or Sugar Corn may be either sown in rows four and one half

feet apart, and the seeds placed about eight inches apart in the rows or planted in the hills at distance of three or four feet each way, according to varieties grown or the richness of the soil in which it is planted. The taller the variety, or the richer the soil, the greater should be the distance apart. We make our first plantings in this

vicinity about the middle of May, and continue successive plantings every two or three weeks until the last week in July. In more southerly latitudes planting is begun a month earlier and continued a month later.

duced	Marke	t price.	

CELERY. (Seleri.)

Plant seed in hot bed or very early in open ground. Transplant four inches apart,

when three inches high, in rich soil finely pulverized; water and protect until well rooted, then transplant into rows five or six feet apart, either on surface or in well manured trenches a foot in depth, half filled with well-rotted manure. Set the plants from eight to twelve inches apart. To blanch, draw earth around the plants from time to time, taking care not to cover the tops of the center shoots. Sow Boston Market early and manure it heavily to develop its branching habit. One ounce of seeds gives 4,000 plants.

RED GLOBE ONION.

ONION. (Zwiebel.)

ALL NEW ENGLAND GROWN.

The onion has been cultivated as an article of food from the earliest times, and at the present day is perhaps more universally grown than any other vegetable. A good crop is impossible unless the soil is very rich and kept clean. Use well-rotted manure freely and get the crop in as soon as possible in the spring, no matter if the weather is cold and unpleasant. Sow in drills one foot apart, and cover about one third of an inch, treading or rolling after sowing, so that the hot dry atmosphere may not dry up and destroy the sprouting seed. When three inches high, thin to two inches apart. Stir the ground freely without disturbing the young plants and keep free from weeds. One ounce to one hundred feet of drill four to five pounds per acre.

PARSNIP. (Pastinake.)

Parsnip will do well on a moist and fairly rich soil. The soil should be prepared very finé. Plant in drills about eighteen inches apart.

Improved Hollow Crowned—The best variety...... 50 20 10

PEAS. (Erbse.)

Peas come earliest to maturity in light, rich soils, but for a general crop a deep loam of moderately heavy soil is better. For early crops decomposed leaves or leaf mold should be used; if the soil is very poor stronger manure may be applied. The first sowing will be earlier if covered only one inch deep; those following should be covered two or six inches deep, the deep planting preventing mildew and prolonging the season. Fresh manures and wet, mucky soil should be avoided as they cause the vines to grow too rank and tall. All wrinkled Peas are superior to, more delicate in flavor, and remain longer in season than smooth sorts, for as in sugar-corn, the wrinkled ap-

pearance indicates the greater amount of saccharine matter.

RHUBARB. (Rhabarber.)

Early Scarlet Turnip—An early variety of medium size..... Early Scarlet Olive—Very handsome, a favorite for the garden....

Black Spanish—A round variety for winter use.

White Spanish—Same, only white.

This plant is mostly propagated by division of the roots. The best time to set out the plants is early in the spring, although it is sometimes done in autumn. Make furrows of good depth, three or four feet apart, according to the variety planted; across these furrows at right angles, make others the same distance apart; at each intersection put three or four shovelfuls of good manure, and upon this set the plants. Any good soil will suit rhubarb; but to obtain heavy crops good soil well manured is indispensable.

Linnæus—The earliest and best for garden use; not as coarse and	
Change on the language ments	25
crops	25

SALSIFY. (Haferwurzel.)

Sow in the early spring on light, rich and mellow soil, in drills fifteen inches apart, thin to about four inches in a row. When cooked they resemble the oyster very much.

TOMATO. (Liebes Apfel.)

Tomatoes do best on light, warm, not over-rich soil, and success depends upon securing a rapid, vigorous, and unchecked growth during the early part of the season. Sow in hot-beds from six to eight weeks before they can be set out of doors, which is when danger from frost is past; when the plants have four leaves transplant into shallow boxes or cold frames, setting them four or five inches apart; give plenty of air and endeavor to secure a vigorous, but steady and healthy growth, so that at the time of setting inthe open ground they will be strong and stocky. Even a slight check while the plants are small will materially diminish their productiveness. Set out of doors as soon as danger from frost is over, but before doing so harden off the plants by gradually exposing them to the night air and by the withdrawal of water until the wood becomes hard and the leaves thick and of a dark green color. Transplant carefully and cultivate well as long as the vines will permit. The fruit is improved in quality if the vines are tied to a trellis or to stakes.

permit. The fruit is improved in quality if the vines are tied to a trellis or t	o sta	akes.	
Lb.	3/2	Lb.	Oz

LAWN GRASS.

W. E. Barrett & Co.'s Special Mixture for Parks, Lawns and Gardens.

This is composed of grasses which ripen successively, thereby always presenting a green and cheerful appearance.

Lawns sown with only one or two grasses turn brown under our hot mid-summer sun, and remain in that condition until the cold months of autumn revive them.

The mixture we offer has stood the test of years, and we can fully recommend it.

The best time for sowing is in the spring, from March to May, or in September, using not less than four bushels to the acre.

Lawns require feeding constantly in order to keep their vigor; for this purpose we recommend our special Lawn Dressing. A top dressing once a month at the rate of 250 pounds to the acre will keep the lawn in a thriving condition.

Frequent cutting will keep it looking neat. For this purpose use the Philadelphia or Imperial Lawn Mower.

GRANULATED TOBACCO AND SULPHUR.

Tobacco as a Fertilizer has been known for years and its virtues are familiar to most people. Never before, however, has the crude stem been manufactured so it could be placed where most needed, and where it would do the most good.

As regards the use of stems upon lawns it has been customary to spread them on the grass, let them remain through the winter and then rake them off in the spring.

Wherever you may use this Fertilizer, you will find the foliage of a dark green color and a healthy, vigorous growth.

Tobacco stems we always have on hand. A large stock of this put up in 100 lb. bales, also the Tobacco Dust in barrels of 180 lbs. for Market Gardeners' and Florists' use.

Agricultural Grasses and Clovers.

(PRICES SUBJECT TO MARKET CHANGES.)

For general grass-seeding for mowing lands, sow Clover, Timothy, Red-Top mixed together; for one acre, eight pounds Clover, one-half bushel Timothy, one bushel Red-Top (Chaff), or eight pounds Fancy Clear Red-Top.

Finest Mixture of Grass Seeds and Clover for Hay and Permanent Pasture.

The importance to the farmer of a good selection and proper mixture of grass seeds for the various purposes of cultivation, for mowing, for soiling, for permanent pasture, etc., cannot be over-estimated. We prepare a special mixture containing only the most suitable grasses for permanent pastures and meadow lands, such as Orchard Grass, Meadow Foxtail, Sheep's Fescue, R. I. Bent, Meadow Fescue, English Rye Grass, Perennial Sweet Vernal, Red-Top and Clovers. Two to four bushels of this mixture is needed to seed an acre, according to the condition of the land.

All our Grass and Clover Seeds are of the Finest Quality. Comparisons of Samples and Prices Invited.

Timothy or Herds. Phleum Pratense. A well-known nutritious grass, which on most soils will produce a better crop than any other variety. We offer a particular choice sample of seed. Sow one-half bushel per acre, if alone. Weight per bushel, forty-five pounds.

Red Top. Agrostis Vulgaris. A valuable native permanent grass, growing in almost any soil, moist or dry, and standing our hot climate. We receive this seed direct from the western growers of finest quality. Sow three bushels per acre, if alone; it is generally sown mixed with Timothy, one and one-half bushel Red-Top and one-fourth bushel Timothy. Weight per bushel, ten pounds.

Red Top Clean Seed. Chaff and weed sifted out, extra fine quality.

Rhode Island Bent. Agrostis Canina. A fine, hardy, very compact grass; very permanent, readily forming a heavy sward; excellent for pasture. Sow four bushels per acre, if alone. Weight per bushel, ten pounds.

Kentucky Blue. Poa Pratensis. Known as June Grass. An early grass of great value; makes a close, velvety turf, and is excellent for pasture; generally sown mixed with other grasses. Sow about three bushels per acre, if used alone. Weight per bushel, fourteen pounds. Finest quality seed.

Orchard. Dactylis Glomerata. One of the earliest grasses; yields immense crops, and is excellent for pasture or hay; should be cut as it is coming into bloom and it will produce a heavy second crop. One of the best grasses. Sow three bushels per acre. Weight per bushel, fourteen pounds.

Perennial Rye Grass. Lolium Pretenne. An early, hardy and very nutritious grass for meadows, pastures or hay crop. Generally used with other grasses. If used alone, sow two bushels per acre. Weight per bushel, twenty-four pounds.

Italian Rye Grass. Lolium Italicum. Thriving in any soil, yielding a very early and abundant crop; excellent for pastures mixed with other grasses. Sow three bushels per acre. Weight per bushel, eighteen pounds.

Hard Fescue. Festuca Duriuscula. This splendid grass is found in all the best lawns and permanent pastures; invaluable for dry soils; of low, dense-growing habit. Sow three bushels per acre. Weight per bushel, fourteen pounds.

Sheep's Fescue. Festuca Ovina. Of dense growth; excellent for dry situations and sheep pastures. Sow two and a half bushels per acre. Weight per bushel, twelve pounds.

Tall Fescue. Festuca Elatior. Excellent for permanent pastures on moist soils, on which it yields immensely. Cattle and stock eat it greedily. Two and a half bushels of seed for one acre. Weight per bushel, fifteen pounds,

Meadow Fescue. Festuca Pratensis. Of great value in mixtures for permanent pastures; of excellent nutritious properties, and is much relished by live stock. Sow two and a half bushels per acre. Weight per bushel, fifteen pounds.

Crested Dog's Tail. Cynosurus Cristatus. A perennial grass much valued for its dwarf habit and hardiness. One of the finest grasses for lawns. Sow two to three bushels per acre. Weight per bushel, twenty-eight pounds.

Tall Oat Grass. Avena Elatior. Succeeds well in pastures with other grasses, makes splendid hay. Sow four bushels per acre. Weight per bushel, thirteen pounds.

Sweet Vernal. Anthroxanthum Odoratum. Useful to mix with other grasses for lawns, in which it is invaluable on account of its early growth and fragrant odor, which it imparts to the other grasses when drying; very hardy and permanent. Weight per bushel, eleven pounds.

Meadow Fox Tail. Alopecurus Pratensis. Very valuable mixture for permanent pastures exposed to heat and draught; early and rapid in growth; not a valuable hay grass. Weight per bushel, eight pounds.

Rough Stalked Meadow. Poa Trivialis. An excellent permanent grass to mix with other varieties for moist pastures. Produces a constant supply of nutritious herbage. Suitable for growing in shade. Sow one and one-half bushel per acre. Weight per bushel, fourteen pounds.

Wood Meadow. Poa Nemoralis. Well adapted for growing under trees and in shaded situations. Dwarf and fine growing. Sow about two bushels per acre. Weight per bushel, fourteen pounds.

CLOVERS.

All carefully cleaned and selected samples. Prices variable.

Ohio Clover. Small.

New York Clover. Trifolium Pratense. Medium; finest quality.

Mammoth, or Vermont Clover. Strong growing; heavy cropper.

Alsike, or Swedish. Trifolium Hybridum. Luxuriant and sweet.

White Clover. Trifolium Repens. Excellent for lawns, as it remains green.

Lucerne, or Alfalfa. Medicago Sativa. Bears heavy crops of forage; will stand cutting three or four times in a season.

Crimson Clover. Trifolium Incarnatum. Is an annual, will flourish well on poor soil, grows about two feet high, sown during July and August, often cuts ten tons of green fodder, if cut from first to tenth of May.

MILLETS-HUNGARIAN GRASS.

Prices variable. Subject to Market Fluctuations.

Hungarian Grass. Panicum Germanicum. One of our most forage plants, and yield immensely, even when the weather is so dry that other crops dry up. One of the best annual grasses for green fodder or hay. Sow from the middle of June till the last of July. One bushel seeds an acre. Weight per bushel, forty-eight pounds.

Millet Common. Panicum Miliacum. An excellent forage plant, very early, two to three feet high, heads open, branching panicles. Sow one to one and a fourth

bushels per acre. Weight per bushel, fifty pounds.

Millet German. Golden Millet. Of stronger and taller growth than the Millets, and does not mature so early. Sow one to one and a half bushels per acre. Weight per bushel, fifty pounds.

GRAINS, FIELD PEAS, VETCHES, ETC.

All Expressly Selected and of Very Best Quality.

Prices variable. Subject to Market Fluctuations.

Barley-Fine sample.

Buckwheat, Common.

Tares, or Spring Vetches.—Splendid for stock; very heavy and fine crops can be raised; sow with oats, fine seed.

Amber Sugar Cane.

Cow Peas.

VEGETABLE PLANTS.

We carry in their season, a full line of the best varieties of Cabbage, Tomato, Pepper, Cauliflower, Celery and Lettuce Plants. These are grown with great care from selected stocks.

BIRD SEED AND PARROT FOOD.

Prices Variable. Subject to Market Fluctuations.

Sicily Canary. German Rape. English Rape. Flax. Hemp—Best quality. Maw. Millett.

Cuttle-Fish Bone. Bird Gravel. Paddy, or Unhulled Rice. Sunflower Seed. Parrot Food-Mixed Finest. Rejected Wheat - Best quality for poultry.

GRAY WINTER OR TURF OATS.

This new oat can be sown just like wheat in the Fall, for they are as hardy and will

stand as much cold as that crop after they have got well started.

The great value of these oats is only just beginning to be appreciated in other parts of our country, although they have been for the past ten or fifteen years the principal variety grown in Virginia. This crop seems to be following the same course in its development and use by American farmers as Crimson Clover. The Crimson Clover was largely grown in Virginia for the past twenty years. It was then taken up by Maryland and Delaware farmers, and since then its merits have become generally known all over the United States. In the past two or three years they have been planted in several northern and western states, where they have given the most satisfactory results.

States. In the past two or three years they have been planted in several northern and western states, where they have given the most satisfactory results.

Fall Seeding. They should be sown broadcast, at the rate of about one and one-half bushels per acre, in August or early September; or further south can be sown as late as the twentieth of October. They make a good growth before winter sets in, and furnish excellent grazing during the late fall and early spring and during open spells in the winter, without injury to the grain crop afterwards. Their turfing and stooling qualities are remarkable, and even when thinly sown they will, under anything like favorable conditions, soon spread and cover the ground with thick, heavy growth. The yield of grain is very large: yields of from fifty to seventy bushels per acre can reasonably be expected is very large; yields of from fifty to seventy bushels per acre can reasonably be expected on good soil; on rich soils and under favorable circumstances they will yield as high as one hundred bushels to the acre (one farmer reported 107 bushels per acre). The grain is a dark gray color, with distinct stripe; it is heavier than the ordinary oats, weighing from thirty-five to forty pounds to the measured bushel.

CRIMSON, OR SCARLET CLOVER.

Crimson Clover is one of the best crops which agriculturalists could grow. It enriches both the land and the pockets of customers. The last two years have witnessed a regular boom in this seed all over the country, and it is now recognized, both by experimental

stations and cultivators of the soil, as a money-making crop in several ways.

Crimson Clover should be sown broadcast at the rate of twelve to fifteen pounds per acre in the north from July 15th to September 15th; in the northern part of southern states until the roth of October, and in the extreme south until the end of November. It is extremely hardy, and will stand any amount of cold when well established. It grows

during the fall, winter, and spring months.

Any kind of soil will suit this clover. It succeeds admirably on sandy soils; on those too light for ordinary clover this will succeed and make a good crop, likewise on the

heavier soils. All situations seem to suit it except wet land.

Crimson Clover, if sown sufficiently early to get large enough, will make splendid winter grazing for sheep and all kinds of cattle. We know of several lots that have been grazed close during the winter and spring months which have afterwards made good crops to mow.

There is no better crop for cutting green in the spring than this. It makes elegant

food for horses, cows, and all kinds of stock.

For green manuring Crimson Clover has no superior. Its capacity for stooling and root formation is very great; single branches will make as high as one hundred branches and heads.

POTATOES.

In order to have the best success in growing Potatoes, it is necessary to plant as early as the ground can be made ready. Select a rich soil, and plant in rows three feet apart, and the sets one foot in the rows. If wood ashes and plaster can be procured, sow a good dressing over the field after the Potatoes are up. If a very early crop is desired, it will be necessary to *sprout* the Potatoes before planting. Cut the Potatoes into pieces of any size desirable, and place in a warm, light room for four to six weeks before required for planting in the open ground. During this time shoots will start out strong and vigorous, so that, as soon as planted, they will send out roots and grow much more rapidly than those treated in the ordinary way. Another method is to place the sets in a hotbed two weeks before they are wanted, and then lift carefully and set out on fresh horse-dung, so that the heat will cause them to start at once. If the Colorado potato beetle makes its appearance, the vines must be dusted with Paris Green, mixed with about eighty parts of plaster, or, what is better, mix the Paris Green in water, one small tablespoonful to a pail, and apply with a small brush or broom. Take care to stir the mixture often, or else the Paris Green will settle to the bottom. Two or three applications during the season will usually suffice to clean off all the beetles.

New Queen. This is a very productive new seedling, and the best early market Potato ever sold in this country. In shape and color it resembles the Hebron.

Early Norther. This new variety is a good addition to the standard early varieties, and is a seedling from the Early Rose. It resembles it in shape and color and will out-yield its parent thirty per cent. It is a strong, vigorous grower of fine eating quality, well adapted to all soils and climates.

XX. Early. This is the earliest Potato grown; will bear heavy manuring with Commercial Fertilizer, is a good yielder, free from rot or disease of any kind, is not excelled by any Potatoes for table use, resembling the Rose in color. It is the coming Potato for market gardening. Houlton Early Rose. This standard early Potato is so well-known as to need no description. We are prepared to furnish fine Maine and Prince Edward Island Early Rose

to furnish fine Maine and Prince Edward Island Early Rose in large lots at special prices.

Clark's No. 1. Extra early and very productive; 450 bushels were grown on one acre. It cooks mealy.

Early Beauty of Hebron. Very rapid and vigorous grower, ripening a week ahead of Early Rose, which it resembles, but far exceeds in great productiveness and excellence for table use, either baked or boiled. A good keeper, pure white skin and flesh, rich and delicate flavor.

"Carman No. 3." The best late variety ever grown. Like the "Carman No. 1," it is a seedling from seedlings, and it resembles that variety in having few and shallow eyes. Without any approach to an exception it is the greatest yielder ever introduced! It may fairly be claimed that it does not yield any small tubers at all. It bears its tubers very close to the plant, a single turn of the fork turning out every Potato. It is of the largest size and of the shapeliest form. It is a perfect keeper; that is, it will not sprout up to planting time, unless kept in a warm place. Both skin and flesh are of extreme whiteness. Eyes few and shallow. Late in ripening.

Our Claims for "Carman No. 3" are: 1st. It is the handsomest large Potato ever produced. 2d. It will out-yield any other Potato whatever. 3d. Practically every Potato is of marketable size. 4th. Its table qualities are fully up to the highest standard; it has no hollow hearts, and no hard or dark parts.

PREVENTION OF POTATO BLIGHT.

H. P. Gould, assistant in the horticultural department of the State Experiment Station at Orono, furnishes an interesting article on Secretary McKeen's agricultural bulletin for November, giving the results of an experiment made at the station, the past season on the use of Bordeaux mixture for potato blight.

The plot of potatoes which entered into the experiment was planted very late, so that the first application of fungicides was not made until July 13th. Two other applications were subsequently made at intervals of two weeks. It is usually recommended that four or five applications be made at intervals of ten days, but on account of the dry weather it was considered necessary to make but three applications.

This plot was divided off into eighteen rows. The first row was sprayed with Bordeaux mixture; fungiroid was applied to the second, while the third was left untreated to serve as a check,—and so on throughout the plot—every third row in order receiving the treatment described above, making six rows sprayed with Bordeaux mixture, six treated with fungiroid and an equal number which received no treatment.

The general showing is given in the table below:

	Total Weight	Ratio of Yield.	Weight of Decayed Tubers, lb. oz.	Per cent. of Decayed Tubers.
Bordeaux	2623/4	1.00	I	4
Fungiroid	219	83	18 11	8.5
Unsprayed	19834	75	20 5	10.2

It will be noticed from even a very superficial glance at the table, that the yield of the rows sprayed by fungiroid is only eighty-three per cent. of that of those treated with Bordeaux; also that the decayed tubers from the sprayed rows amounted to only .4 of one per cent. by weight, of the total yield; these decayed tubers were found all in one row, the other five rows being entirely free; the decayed tubers from the rows treated with fungiroid amounted to 8.5 per cent. of the whole, and in the untreated rows 10.2 per cent. of the whole weight.

From the evidence at hand it seems apparent that the blighting and rotting of potatoes can be effectively held in check, if not entirely prevented by the use of Bordeaux mixture.

Such a conclusion is also supported by the results of experiments at many other stations in other states.

Experiments at the R. I. Agricultural Experiment Station, at Kingston, thoroughly demonstrate the value of Bordeaux mixture for potato blight. For full particulars see the Station Bulletin, No. 38, for June, 1896.

FERTILIZERS.

DARLING'S ANIMAL FERTILIZER.

Contains a very large percentage of Ammonia, Phosporic Acid and Potash; and for a general Fertilizer for all crops, it is the best. We have sold it for the past twenty years, and the increased demand each year speaks volumes for its value.

THE POTATO AND ROOT CROP MANURE.

It is one of the best Fertilizers for potatoes ever sold. It contains a very high percentage of Potash and Phosphoric Acid, and produces a smooth, desirable shaped Potato. The Potash in this brand is entirely from Sulphate of Potash; the Phosphoric Acid is from bone.

DARLING'S PURE FINE BONE.

Contains twenty-five to twenty-eight per cent. of pure Phosphoric Acid, and three to four per cent. Ammonia, and is the very best material from which Phosphoric Acid can be obtained.

DARLING'S LAWN DRESSING.

There is a call at the present time for a commercial fertilizer to be used on the lawn. Stable manure is objectional as it is bulky, containing a large amount of refuse material. It also contains the seeds of many weeds and obnoxious grasses that are difficult to root out when once they have gained a foothold. By the use of this fertilizer all these objections are removed. It will produce an excellent growth of grass of a rich green color.

PULVERIZED SHEEP MANURE.

A soluble plant food highly recommended for all purposes where a first-class fertilizer is required. It is a pure natural manure, and has long been recognized as one of the most beneficial. As a top-dressing for lawns it is unequalled, being free from weed-seeds, and exceedingly stimulating. For lawns it should be used at the rate of 500 pounds per acre. As a fertilizing agent for plants indoors, and in the open garden, it is one of the very best.

LAND PLASTER, OR GYPSUM.

This is an excellent addition to land for such crops as require lime and sulphates, particularly Turnips, Potatoes, Grasses, etc.

Sulphate of Ammonia, Dissolved Bone Black, German Potash Salts, Sulphate of Potash, Nitrate of Soda, Plain Dissolved Bone, Muriate of Potash, Sulphate of Potash (High Grade)

We can furnish these materials, either separate or mixed in any proportion, or to conform to any formula.

BOWKER'S AMMONIATED FOOD FOR FLOWERS.

Made expressly for flowers grown in the house or garden; clean, odorless and produces early, abundant blossoms, greatly adding to the richness and brilliancy of color, health and luxuriance of the foliage. It is clean and absolutely odorless, thus supplying a want long felt by ladies and florists.

The First and Only Dwarf Sweet Pea,

Cupid

Grows Only Five Inches High.

The Floral Wonder of the Age.

Cupid excites wonder wherever seen—such a Sweet Pea, yet in habit so unlike a Sweet Pea! It has all the fragrance of the most favored Eckfords. The flowers are the size of the Emily Hen-

derson but with more substance in the petals of both wings and Standards than any other Sweet Pea. It bears two and three blossoms on the end of each stem,—all opening about the same time, so that it is not necessary to pick a stem with a bud and an open blossom.

Cupid grown in a twelve-inch pot just fills the top; with its blooms of glistening whiteness it is wonderfully attractive in the house, the public hall, or the conservatory. In the garden it will be used chiefly as a border plant, for it will bear trimming to just the proper shape. The foliage alone is pretty enough for any border, but this is forgotten when Cupid bursts into a mass of snow-white blossoms, not unlike a very dwarf hedge covered with snow.

Price per packet, ten cents; per ounce, twenty-five cents.

INSECTICIDES.

Tobac-Oil-Eight and one-half cents worth of tobac-oil fumigates 2000 square feet of floor space thoroughly, exterminating all Aphis in one application. It differs from all other Tobacco Extracts, as it vaporizes completely, leaving no sticky, dirty mass to burn and smoke. It is white and clear as water, being a distillation of the strongest nicotine-producing Tobacco. All impurities and organic substances have been removed. Its percentage of pure nicotine is greater than any other product on the market when it is diluted and ready for application. Experiment has found it equal to the task set for it, and non-injurious to the most delicate growth. If it fails in any particular to give you entire satisfaction your money will be refunded. Fir-Tree Oil—Destroys all plant insects without injuring the plant. Dilute in

Dilute in the pro-

portion of one pint to twenty gallons of water.

Hellebore White, Powdered—An excellent protection from currant worms, grape slugs, etc. May be applied dry by dusting on with bellows, or as a liquid mixed at the rate of one pound to thirty gallons of water.

Paris Green, Pure—Mixed at the rate of one pound to one hundred gallons of water;

it will prove effective against all chewing insects.

Little's Antipest—A sure destroyer of all insect pests. It is non-poisonous and harmless to vegetation. Mixed with water in the following proportions, it is effectual against—Greenfly, one pint to ten gallons of water; mealy bug, one pint to one and one-half gallons; red spider, one pint to two gallons; ants, wire worms and slugs, one pint to one gallon.

Slug Shot (Hammond's)—Excellent for destroying cabbage, turnip and beetfly,

potato bugs, currant worms, etc. Prepared ready for use.

Tobacco Soap—Dissolve in proportion of two ounces to a gallon of water and apply with a syringe or atomizer. It will destroy rose slugs, aphides, greenfly, bark lice, etc. **Tobacco Dust**—If dusted on while the foliage is moist it destroys rose-lice, cabbage

and turnip fleas, etc. Spread upon the ground it keeps off all earth insects, and also acts as an excellent fertilizer.

Tobacco Stems-For fumigating plants infested with greenfly, etc.

Whale-Oil Soap-For washing trees and destroying all insects on the bark. Mixed at the rate of one pound to four gallons of water, it will rid cabbage, rose bushes, peach

trees, etc., of the aphides that so often infest them.

Bordeaux Mixture-For all fungoid diseases, such as mildew and the various rots of the grape. It is prepared as follows: Dissolve six pounds sulphite of copper (blue vitriol) in six gallons of hot water; in another vessel slake four pounds of fresh lime in six gallons of cold water. When both are cool pour the two mixtures together and add ten gallons of water. This, then, when all is thoroughly mixed, is ready for use, and may be applied at any time without injury to the foliage. We can furnish this all mixed at the small cost of two cents per gallon.

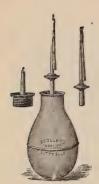

Sheep Dip-For Sheep, Horses and Cattle.

Potato Blight and Rot and Tomato Rot-Use Fungiroid one pound to the acre, or, if desired, mix one pound each Flour and Fungiroid, and use two pounds of the mix-ture to the acre. Apply early in the season, and repeat at least three times, on wet or dry vines.

Grape Mildew and Black Rot-Dust the vines before the leaf-buds have opened and again before the flowers open. Again, when the fruit is pea size; also about two weeks before harvesting. Use a mixture of one before harvesting. pound of Fungiroid, one pound of Air Slacked Lime, and two pounds of Flowers of Sulphur. Applying dry does not soil the fruit, as is the case by wet method.

GARDEN REQUISITES, ETC.

SCOLLAY'S PUTTYING BULB.

A simple and useful device for applying putty to sashes. The putty in a semi-liquid state is ejected by pressing the bulb, enabling one to do the work very rapidly.

SCOLLAY'S INSECT POWDER PUFF.

A new device for applying insect powder of any kind to plants, etc. It will be found very useful for house plants and to house-keepers generally.

Scollay's Rubber Plant Sprinkler.

a Made of rubber with flat bottom and a finely perforated detachable brass top. Very useful in bouquet making and window gardening for sprinkling and for all purposes, where a fine spray is required.

Tin Foil—We have on hand a large supply of this. We sell at low prices in any quantity to suit the purchaser.

Sulphur Bellows—The use of these Bellows insures the destruction of bugs, worms, and all insects, as well as mildew upon grape vines. It distributes flour or sulphur very evenly over every part of the affected plant, and can also be used for smoking plants and vines with tobacco.

Brass Green-House and Garden Syringes.

These Syringes are useful for all horticultural purposes, and are fitted with caps or roses for ejecting water in one stream or dispersing it in the most gentle manner, or with great force when required. They are especially adapted for whale oil soap, tobacco juice, etc., in cleaning plants and flowers from those destructive insects which are so injurious to them. Very strongly made of best quality of brass, finely polished, elegant in appearance, not liable to dent or become injured, and if properly cared for will last a lifetime.

THE EXGELSIOR KNAPSAGK SPRAYER.

This machine consists of a copper reservoir holding about five gallons. The pump being made entirely of brass and copper can neither rust nor corrode. There is a large air chamber inside of the reservoir which will keep up the pressure and will continue to discharge the spray for nearly one minute after the operator stops pumping. A brass pipe fifteen inches in length, with a stop cock, is furnished with each machine, including the celebrated Vermoral Nozzle, so highly recommended by the Department of Agriculture and leading entomologists in all parts of the United States. This nozzle brings the liquid out in shape of a fine, mist-like spray.

This machine is carried on the back of a man, knapsack fashion. From five to six acres a day can be sprayed with it. This sprayer is guaranteed to do satisfactory work or money will be refunded.

MYERS' SPRAYING OUTFIT

It is the best and cheapest pump of the class ever put on the market. Its capacity is greater than many more expensive pumps. It will throw a continuous and powerful stream to the height of 50 feet or more, and when used with the Improved Excelsior Nozzle it will diffuse a poisonous solution over a wide area. It can be mounted on a barrel, cask or tank, and used for spraying orchards, orange groves or potato fields, and when not in use for these purposes, can be used in a cis-tern or well for protection against fire, washing wagons, carriages, etc., sprinkling gar-dens and lawns, and is useful for a thousand purposes about the farm and home. The nozzles furnished with all my Spray Pumps can be regulated to throw any desired spray wanted, from that of a fine, mist-like spray to as large a stream as you want.

Myers' Bucket Spray Pump, with Agitator.

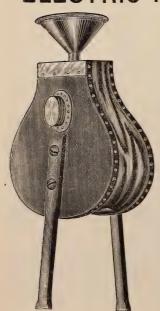

This spray pump is constructed entirely of brass, a material that is not affected by the poisonous arsenites used in different formulas for spraying fruit trees, vines and shrubbery. It is so arranged that the labor of pumping is all done on the downward stroke of the piston and nothing on the up; and the fact that it is not necessary to steady the pump with a foot rest makes it very easy to operate and gives it extraordinary power. The effect of this operation while pumping is to hold the pump down, and it is not necessary to use a foot rest or in any way steady the pump while in operation, except by means of a small clamp which attaches to the top of the bucket or tub and steadies the pump, holding it in proper position.

It is provided with a large air chamber, and has a ball valve at the bottom between the cylinder and the air chamber, whereby the pressure is held uniformly in the air chamber and on the hose so that the nozzle throws a continuous spray, and is not effected by the movement of the plunger. The operator is enabled to keep a constant pressure on the nozzle of from 50 to 100 lbs. with very ordinary exertion. It will throw a solid stream 50 feet and is of unusual value for washing windows, buggies and extinguishing fires, sprinkling lawns,

N BUCKET
YERS SPRAY PUMP
I V I PIPE EXTENSION

flowers, etc. For spraying it is arranged so as to discharge a fine jet in the bottom of the bucket and keep the solution thoroughly mixed and agitated, a feature peculiar to this pump only and a very necessary feature to a spray pump. The pump is also provided with a sprinkler for flowers.

ELECTRIC INSECT EXTERMINATOR.

Simple, Practical, Effectual.

Put the powder into the machine through the opening in the side. Work the handles, when the powder is discharged by the force of the air, and by means of the funnel outlet is distributed evenly over the plant. A perforated tube on inside of machine regulates the quantity and prevents any surplus of powder being discharged.

By far the most economical as well as the most effectual device for applying Paris Green, and with so little labor. Death on Potato Bugs. Paris Green applied with the ELECTRIC will knock them stiff, all sizes and all ages every time, and only one pound required for an acre of potato vines. This machine works to the best advantage by putting in about a half a pound of powder at a time.

Experience has proven that Paris Green applied in its pure, unadulterated state does not injure the vines, and is far more effectual than when mixed with plaster or any other substance, and with the ELECTRIC it is done so easily. Every farmer who once tries the ELECTRIC in killing potato bugs will never do without it. The ELECTRIC is used to the best possible advantage in applying Insect Powders of all kinds.

Leggett's Paris Green or Dry Powder Gun.

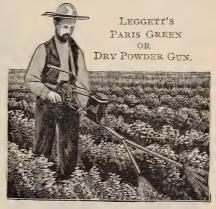

WITH TUBES, NOZZLES, STRAPS, ETC.

LEGGETT'S PARIS GREEN OR DRY

For Orchard, Vineyard, Gar. den or Po. tato Field. Distributes ParisGreen Sulphur, "Fungiroid," (a powdered Bordeaux Mixture) or any dry powder.

Illustrated Circular on application.

Most approved method of distributing dry insecticides over potato vines, vegetables, grapes, bushes, etc. The distribution of the powder can be so easily regulated that half a pound of Paris Green or London Purple

FARMER'S **FAVORITE EXTERMINATOR**

The best machine ever invented for applying poisons mixed with plaster, etc. A shower of dust is forced through, be covered as desired.

may be evenly distributed over an acre of potatoes. By leaving a slight opening in the slots at bottom of the reservoir, the faintest smoke of powder can be forced from the gun.

NORTON'S PLANT DUSTER.

This is a device to be carried along rows light or heavy, accord- of potatoes, corn or other plants to be powing to the length of the dered, and a downward jolting movement turn given; from eight to given to the powder-holding chamber caustwenty-four inches may ing a dust guard to project over each hill be covered as desired. successively, so that the dust thrown out will be confined and directed upon the leaves and stalks of the plants operated upon to kill bugs or similar insect pests.

FLORISTS' MISCELLANEOUS.

Water Pots, Rubber Hose, Hose Nozzles, Garden Trowels, Garden Lines; Hedge, Border and Pruning Shears; Edge Knives, Ladies' Floral Tools, Pruning and Budding Knives, Hand Weeders, etc.

MORRILL'S TREE INK.

THE CANKER WORM EXTERMINATOR.

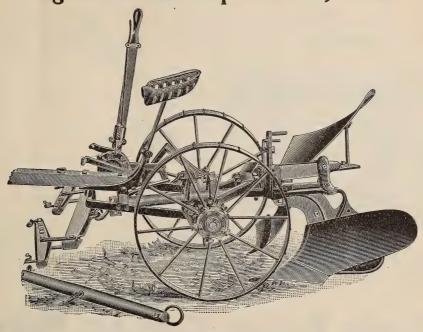

NEW FIBRE HOT-BED MAT.

Mouse Proof; Rot Proof; Almost Indestructible.

The new Singapore Fibre Mat for Hot-beds will be hailed with pleasure by all gardeners and florists. It is very firmly put together, and weighs about thirty-two pounds. It is very much more durable than anything that has yet been introduced for this purpose, and its effectiveness as a frost resister is of the highest order. Mice and rot make short work of ordinary straw mats unless great care is taken in their preservation; the Singapore Fibre Mat is not subject to these defects, and being made of an air-holding, flexible, cane fibre—exceedingly strong and durable—commends itself at once to everyone who has hotbeds. It is without question the best and most economical mat made, and as the cost is only a trifle more than that of the common straw mat, its general use is assured.

Agricultural Implements, Etc.

National Reversible Sulky Plow.

Tillers of the soil have long felt the pressing need of a Reversible Sulky Plow that would do perfect work on both level and side-hill land, but such a thing heretofore has seemed among the impossibilities.

In their construction are used Two Perfect Steel Flat-Land Plows Mounted upon a Steel Beam. When one is in use the other hangs at right angles above it, and greatly assists in preventing the plow from tipping on steep hill-side land.

Either Plow can be detached from the Sulky and attached to Beams and Handles, thus making two perfect Flat-Land Plows.

We Furnish Beam, Wheel, Glevis and Handles for \$5,00

The Sulky is made so as to use two or three horses. Plows are raised out of the ground by one of the most perfect power lifts ever made, and can be operated while walking behind the plow as well as in the seat. The Seat is Adjustable so that the operator sits in a level position. It is made very durable, mostly of steel and malleable iron, and is warranted to do as good work on level land, turning furrows all one way, and more than that it works perfectly on side hill. All that the farmer needs in the plow line is contained in this one plow, viz: two flat-land plows, right and left hand, a reversible sulky plow, either for the flat land or side hill. By removing one plow you have a single sulky plow, either right or left hand as you wish.

Every plow and every part is made of steel or iron, except the pole. In fact, not a thing has been left undone that could be done to make this the best sulky plow in the world.

THE IMPERIAL PLOW.

THE IMPERIAL IS STATE BEST PLOW IN THE WORLD.

either. Seventh, so easily repaired. hanging and rolling cutters and wheels. running so boys can handle them. Te. of parts. Try it, if not true, return it.

Over Two Hundred Thousand in use. Best general purpose plow in the world. We respectfully call the attention of dealers and farmers to this plow. We feel confident that they will find it well adapted for general work as any plow in the market.

The "Imperial" is the most durable, economical and desirable plow the farmer can purchase because: First, it is made on correct principles and will not rack easily. Second, it is a perfect implement. Third, for one, two or three horses combined. Fourth, sod and stubble and deep plowing which is essential. Fifth, turning a furrow smoothly and slowly, so all trash goes underneath. Sixth, mold boards, shares, landsides and cutters and interchangeable in steel chilled or cast iron, or a combination of

A. Eighth, they are equipped with jointers, steel knee, ils. Ninth, of very light draft, easily handled, steady Tenth, adapted to any kind of soil by the interchange it

OLIVER PATENT CHILLED PLOW.

We will carry this season a full line of the different styles and sizes of the Oliver Chilled Plow, best adapted to our New England soils.

This plow is well known in this vicinity, and its work cannot be praised too highly. Remember that every Plow made by the Oliver Chilled Plow Works is offered with the absolute guarantee of being the best article of the kind that can be made for the price asked. Every Genuine Oliver Chilled Plow has stencilled on the woodwork the inscription, "Manufactured by the Oliver Chilled Plow Works, South Bend, Indiana, U. S. A."

THE YANKEE SWIVEL PLOW.

(SIZE FOR ONE, TWO AND THREE HORSES.)

The demand for a good working, light Wooden-Beam Plow has induced us after thorough trial to add the above to our already long lists of popular plows, believing that

only a fair trial is needed to convince any one of its merits.

The Steel Lever Shifting Clevis will be found of great value in enabling the farmer to do good work, as the amount of land the plow takes either way can be regulated at will by the ploughman without stopping his team. It is simple in operation and so made that it is very durable and will not get out of order.

CONSTRUCTION.—These Plows are made from the Patent Steel Metal. It is not only harder than the chilled iron, being uniform throughout, but much less liable to breakage,

while it scours readily in any soil.

The beams and handles are made of the best Eastern White Oak, nicely painted, striped and varnished, making the handsomest Swivel Plow ever placed upon the market

The fact that since we first introduced "THE CONICAL" we have made and sold over ten thousand of this kind of plows, should be a good recommendation for it. The increased demand for this plow shows the strong hold it has among the farmers. For all kinds of soil and work it has no equal.

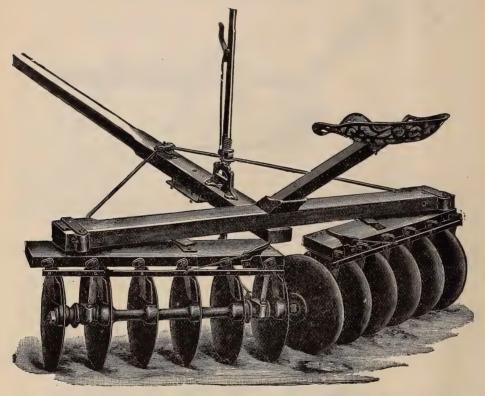

kinds of soil and work it has no equal.

In the State of Rhode Island we are the only manufacturers of the celebrated Conical, Wood's, Wright's Eagle and Iron Beam M. Plows, and the shares, Geddes Folding, Forty tooth Scotch and common A. Harrows, Steel Tooth Cultivators, Stone Drags, Mounted Grindstones, Road Scrapers, Garden and Field Rollers, Store Trucks and Garden Wheelbarrows.

THE ARLINGTON SWIVEL PLOW.

The Arlington Plow has become a favorite in many sections. Mold boards are made of Patent Steeled Metal, and all castings nicely polished. The beam and handles are made from selected stock. Their general appearance commend them to all desirious of a first-class, easy working plow.

The O. R. G. DISK Happow. STRONG. DURABLE.

This is the most complete and perfect working Harrow made. It has no equal in reliability and effectiveness. It is simple in construction, and any farmer can put it together without assistance in a few minutes.

THE NEW PATENTED HINGE allows great flexibility and free action vertically and horizontally. The tongue has adjustable brace rods, and the seat standard is attached to it, so there is no weights on the horses necks.

It has new Gang Scrapers; by pressing driver's foot on a convenient treadle the disks are easily cleaned.

If you want to crush your clods, cut up the sod ground, or prepare any kind of soil to receive the seed, you cannot buy so good a machine as this one.

Harrows furnished with grain and seed-sowing attachments when desired.

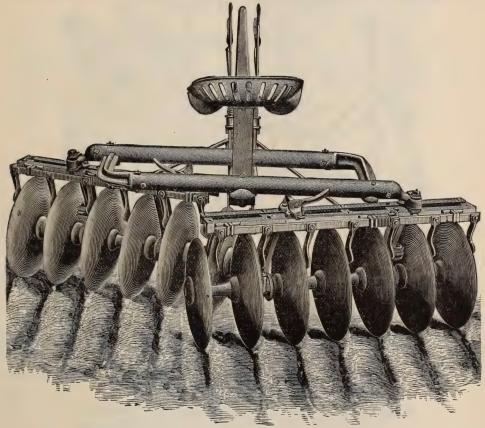

It is unexcelled for preparing any kind of ground, yet the strongest claims for it are on land that no other harrow will affect. It will pay for itself in a single season where any such land as the following is prepared.

On overflowed land that has broken up very cloddy. On hard baked or crusted land. On black bottom where the plow will not scour. For pulverizing orchards, either for sowing seed or cleaning out weeds. For preparing corn ground or stubble for sowing grain, without previous plowing.

It is being used, however, for preparing land for sowing grain without previous plowing more largely than for any other purpose, making it one of the greatest labor-saving machines known.

Bell's Center Cut Disk Harrow.

The Only Over-Lapping Genter Gut Disk Harrow in the World.

There is no farming tool that covers and cultivates so much ground as a good disk harrow, but they are all so made that a little uncut ridge of ground is left in the center. How to reach that ridge and cultivate an even surface has been the problem. It is now solved by "Bell's Center Cut." It is the only harrow that REACHES THE CENTER RIDGE and pulverizes all the ground from outside to outside, leaving a smooth surface behind it The importance of this

SURE CULTIVATION TO AN EVEN DEPTH,

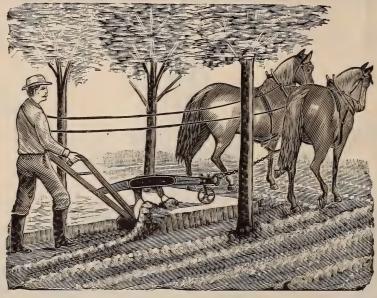

and leaving no ground uncultivated, cannot be over-estimated. There will be no hard ridge,

There will be no Row of Weeds between the Grain.

Farmers who broadcast seed or grain will have no other machine after using this center-cutting harrow.

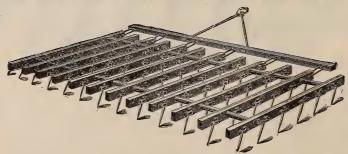

All Center Cut Harrows have one more Disk than other Harrows. "When the ground is uncultivated the crops won't grow, but weeds will."

The Deerfield Steel Plow Harness

Which uses no doubletrees or traces, is acknowledged by all to be the most sensible harness for all farm purposes that was ever put upon the market. It is the only plow harness that is made where each horse can be harnessed in the stall, the same as in the strap harness, and then are coupled outdoors in a moment. The equalizing device is new and very simple, bringing the draft on each horses' shoulder alike, the same as with the strap harness.

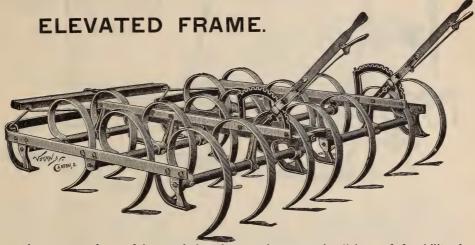

GLIPPER SMOOTHING HARROW.

This is one of the best Smoothing Harrows in the market. The teeth are 9-16 round and are attached to the side of the bars by a Malleable Class, and are so arranged that by hitching to one end of the Harrow the teeth pull slanting; by hitching to the other end the teeth pull straight.

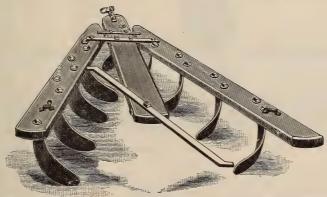

The teeth being convertible merely by change of hitch from perpendicular to slanting it combines all the principles of two harrows in one. The superiority of having teeth in a slanting position is beyond doubt or question, as they cut and pulverize the soil thoroughly without clogging, leaving the trash under the soil. It is also excellent for cultivating Corn, Potatoes and other crops when small.

IMPROYED IMPERIAL SPRING TOOTH HARROW.

As now manufactured is a tool that for completeness, simplicity and durability in structure and ease of manipulation, has no equal. Made of all steel and malleable iron, its strength and lasting qualities cannot be excelled. Draw bar attachment such that with rear attachment, no lateral or side-to-side motion, but allowing of up-and-down or in-andout-of-the-ground motion, same as in a flexible harrow. Distance between frame such that no trash can collect. Arrangement of teeth such that no two teeth track or line up.

Share's Steel Teeth Harrow.

The operation of this harrow when at work is similar to that of a double gang of plows. This, it will be seen, is a lifting, loosening and thorough pulverization of the soil.

They are of exceedingly light draft, as on turf land it takes much less power to cut through sod than to tear through it, after the manner of other harrows, while it does the

work much faster. On stony ground there is no catching under the stones, so there is no necessity of lifting, while it prevents all jerking upon the horses.

They are manufactured of different sizes, from the draft of one horse to four, and are adapted to all kinds of land except among small or low stumps. They are substantially built of the best materials, and so constructed that they will contract so as to be convenient for loading, storing, etc.

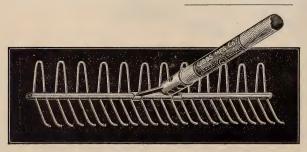

Malleable Iron Clips. The teeth are clamped to the bar. A malleable Iron Fillet fitted into groove and bolted through the bar secures the tooth tightly, and allows adjustment for depth and renewing of teeth when worn out. Tie Bars across the top, Brackets attached to each corner, which turn down when the teeth are turned out of the ground, serve as runners for transporting over unploughed ground.

The Thompson Wheelbarrow Grass Seeder.

This is the only correct way of broadcast seeding. Seed can be sown on any kind or condition of soil, in any kind of weather, any amount per acer requirately. It can be used by any one who can wheel a barrow. There are no cogs, gears or intricate connections in its entire construction. Mud cannot clog its parts. It is impossible for it to sow any way only accurately as the entire working parts are governed by the wheel. Lightness and strength are combined in its construction, and the large wheel (33 inches in

diameter,) makes it very easy to run. The actual weight of complete machine is about 40 pounds.

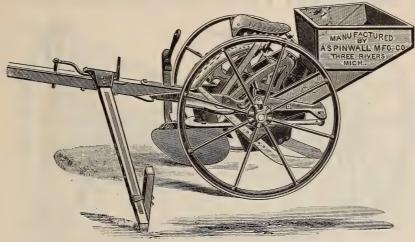

The Gibbs Lawn Rake.

Reversible; all steel; heavily tinned; best that is made. Head is of No. 16 fine cold rolled steel bent in the stiffest form, in which the teeth are securely held. Socket is firmly secured without rivets or weld, guaranteed to be secure. Handles of ash, finely polished. The rake runs smooth, its teeth will not tear the sod or clog with grass or leaves.

The Aspinwall Potato Planter

With Fertilizer Attachment.

The Aspinwall Potato planter marks, furrows, drops and covers automatically, all in one operation.

The planting can be done at any depth desired from three to nine inches and the

covering is uniform.

The dry or top earth is not drawn over the seed by the covers on our Planter, but the moist or under earth is deposited upon the seed, a feature that every experienced potato grower will appreciate. Nothing is more fatal than to cover cut seed in a dry time with dry earth.

The great superiority to hand planting: The rows are straight, the seed is deposited

in a perfect line; this enables close and early cultivation.

The Aspinwall Potato Planter is adjusted to plant either whole or cut seed 10, 13, 15, 17, 21 and 26 inches apart, and the distance of planting is the same in each row.

The Aspinwall Potato Planter is substantially made and very durable and does not get out of order. The working parts are made of steel, and the machine will last many years.

WE GUARANTEE THE ASPINWALL POTATO PLANTER WILL DO ALL

WE CLAIM FOR IT.

Aspinwall Potato Cutter.

The pieces are cut much better in shape, and there being no very thin ones they are less liable to become dried than those ordinarily cut by hand.

The machine is easily worked by one man or boy. The saving of labor is enormous, and where a large acreage is planted it will pay for itself in a single day.

The work of this cutter will make a very fair distribution of the eyes of the potato and we guarantee the work to be done better than the average hand labor.

THIS LITTLE MACHINE IS

Exceptionally Well Adapted

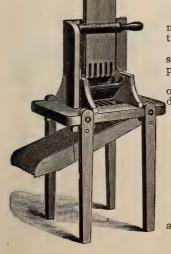

CUTTING SEED

FOR THE

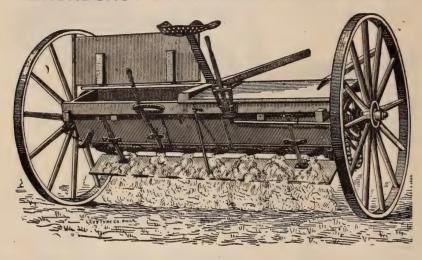

POTATO PLANTER.

and by its use will save many cracked and bleeding fingers.

THE SPANGLER BROADCAST FERTILIZER DISTRIBUTOR.

The above cut illustrates The Spangler Machine for broadcasting fertilizers, hen manure, kainit, plaster or any agricultural chemicals. It has produced a revolution in broadcasting. It is simple, practical and durable and has more good points and real merits than any other in the market.

POTATO GROWERS' DRILL AND BROADCAST FERTILIZER DISTRIBUTOR.

This machine has now been used by the Rhode Island potato growers for the past ten years, giving good satisfaction everywhere.

The Fertilizer Attachment has a revolving roll which constitutes a positive force feed of great power, pulverizing all lumpy fertilizer and always reliable.

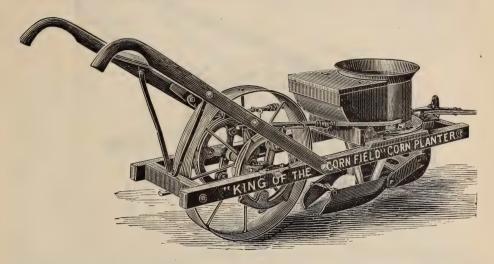

The fertilizer box holds fifty pounds of fertilizer and can be shut off at any time by a lever at

It has been acknowledged by those who have thoroughly tested this machine and have used other machines for growing the potato crop that this machine is the cheapest and the most practical and surest of growing a good crop.

Gorn Planter and Fertilizer Distributor.

See this Planter with the Improvements for 1897 before you buy.

This planter has proved itself perfectly adapted to every requirement; durable and simple in construction, not liable to get out of order, and any one can at once understand and manage it. It performs work with certain and good effect on stony and sward land, as well as on mellow intervale or other smooth land. One horse is sufficient for draft, and seven to ten acres can be planted by one man in a day. The work can be done at once, and when the ground is in best condition to receive the seed, and far better than is possible to plant by hand. The importance in the saving of time will be readily understood, and the superiority of work done is substantiated by the fact that corn planted by this machine germinates much quicker and comes up much more uniformly than if planted by hand.

By a very simple device this machine may be gauged to drop any desired quantity of seed or fertilizer at a time at equal and various distances apart, in hills or drills of uniform depth, or beans planted 4½ inches from the corn, with or without fertilizer with beans. The seed dropping device is positive, never misses or skips a hill, which most other

planters will do.

The operator can see every hill as dropped, both seed and fertilizer before it is covered, therefore insuring him that the seed is in the hill, a feature of great importance that no

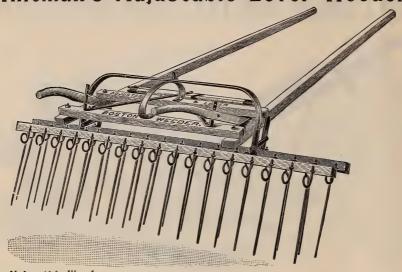

other machine has.

This planter has two conductors for fertilizer, divided in such a way as to have it fall on both sides of the seed. The fertilizer hopper is an oscillator vibrating backward and forward in order to pulverize all lumps, which allows wet or lumpy fertilizer to be used, distributing it in equal quantities as desired. It will drop ashes as well as all commercial fertilizers wet or dry, coarse or fine, which no other machine will do.

Plants field ensilage, fodder and broom corn, beans, peas, pumpkins, beet or other like size seed. This season, several new and useful improvements have been added, among which we mention a new steel concave wheel having substituted steel in place of cast iron for the coverers and clearing plow. New style steel drive rods, improved covers in fertilizer

hopper, etc., making the machine very much lighter and stronger.

Whitman's Adjustable Lever Weeder.

By Using this Weeder fields of corn, beans, potatoes, etc., can be kept clean of weeds without labor and expense of the hoe and without damage to the plants. One trial will convince any farmer that he cannot afford to be without this implement. The teeth are so placed in the bars that they cover the ground in the best manner, and being provided with coils, they are rendered very strong and the greatest vibration is given them, thus taking out the weeds more thoroughly and making the ground finer and looser than can be done with any implement heretofore devised. After planted crops have grown to some size, the teeth that cover the rows can be easily removed, allowing continued weeding and pulverizing without interfering with the crop. The Weeder is 7½ feet wide and contains 35 teeth made of the best spring steel tempered in oil. It is light,

teeth made of the best spring steel tempered in oil. It is light, but strong and durable, is made of the best material and finished throughout in the most perfect manner.

The steel teeth of this Weeder may be adjusted to stand straight or sloped more or less by simply changing the position of the lever, which is firmly held in place by a thumb screw. This can be done in a few seconds, and is not necessary to stop the horse.

BANNER ROOT CUTTERS.

The favorites wherever used. An entire revolution in Root and Vegetable Cutters. They have a self feeder, separate the dirt from the cut feed. Leave the fodder fine enough to avoid all danger of choking.

The "Planet Jr." Garden Seed Drills.

"PLANET JR." NO. 5 MARKET GARDENER'S HILL DROPPING SEED DRILL. PRICE \$12.00 A Good Drill is one of the most important of all the market gardener's tools, and is often invaluable to the farmer. It " pays at both ends;" it saves labor and seed in planting, work and worry in hoeing, and makes a larger and more even crop. Until quite recently there was no such

thing as a good Hill Dropping Seeder; but the demand for a perfect machine for both hills and drills is large and growing, and properly so. If seed is drilled, and the plants thinned, it is often hard to find strong plants at regular distances, even with thick sowing; but with hill-planted crops less seed is required, and you are

Therefore, thinned crops should be planted in hills. sure to find good plants at the exact spot where one is wanted.

Ever since No. 3 Drill was placed on the market it has been the recognized standard, and has given universal satisfaction, but during 1896, the makers have been industriously working to bring out in its best form, an entirely new device for sowing seed; one that they have found exceedingly accurate and reliable, and extremely simple; it is embodied

in two new drills.

Character. The No. 5 Drill is the larger of the two; they are not only the latest, but by far the simplest and best of the hill dropping seeders; while also the most regular and accurate continuous row seeders we have ever seen. Ingenious without complication, direct acting, yet without gearing, brushes, feed wheels or agitators, they are at once durable, strong, light running and easily understood.

It is Simple, because the sowing device is but a single piece in addition to the hopper. That piece is, of course, movable, and, in conjunction with pins in the carrying wheel, does all the necessary work of sowing in drills or dropping in hills. It is a simple shutter at the bottom of the hopper.

We are pleased to offer for 1897 a new, combined tool of great excellence, which can scarcely recommend too highly. It combines conveniently in a single garden implement a capital hill dropping and a continuous row seeder, with the most perfect and complete single wheel hoe, cultivator, rake and plow that the most practical can de-sire. Designed by a sire. Designed by a practical man, it is light, compact, durable and easy running, and does all its great variety of work with a thoroughness and perfection that has never before been attempted, much less equalled.

\$10.00

The New "Planet Jr." No. 3 Hill Dropping Seed Drill.

THE FEED WHEEL is a rubber four-bladed double screw, with alternate paddles, feeding the seed regularly to the discharge opening. It runs in a horizontal metal cylinder, open at the ends, which assists in making the discharge regular and prevents injury to

"Planet Jr." No. 3 Hill Dropping Seed Drill. PRICE \$9.00.

WHAT THE DRILL WILL DO.

This drill will sow a continuous row with greater regularity than any drill ever made, but its distinctive feature is that it will also drop nerry nearly in hills. It opens the furrow, drops either in hills or drills at pleasure, covers, rolls down and marks the next row all at one operation.

and exact. It is changed in a moment from hill-dropping to drill work by simply hooking up the cut-off, back again by releasing it.

This is the most popular combined garden tool known, and deservedly; in its construction are combined strength, simplicity and efficiency, and in the field it has long been peerless. For years unequalled as a seed planter, it is also provided with the most varied and satisfactory set of cultivating attachments known.

Since neither previous preparation of the soil nor perfection of planting will insure a good crop without continued attention and cultivation throughout the growing season, the manufacturers have been careful, while perfecting in the highest degree every part of the sowing devices of our combined machine to provide it with a complete set of tools for garden work. We, therefore, now offer in the Combined Drill, a sower equal in all essential points to that of the separate drill and cultivator teeth, hoes, plow and rakes equal to those used on the Wheel Hoes. The change from a seed drill to a wheel hoe can be made in a few moments by taking out two bolts. Then by putting on the hoes, the machine is ready for the first hoeing of small plants from seed. These hoes can be safely set to cut within an inch of the row, and the earth after them is left in a perfectly broken up and fine condition, and all the weeds destroyed. Their peculiar shape was discovered by long continued and careful experiments in the field, and by comparison and trial with everything of a similar character; they have stood the test of many years' successful work, and have the following practical advantages:

They work next to the row of plants with an edge slanting forward which insures a clean cut close to the row, while the shield-like front of the hoe prevents the earth from falling on young plants. The "Planet, Jr." Combined Drill, just described, will enable a farmer to grow and keep in order a larger acreage of onions than any other single tool. It sows the most difficult seed with great regularity, both as to quantity and depth, and the after-cultivation is admirably done, first with the rakes, next the hoes, cutting away fr

For some years we have sold a combined seed and fertilizer sower, but we find that in addition there is a demand for a larger drill for fertilizers only. This demand we can now supply with the most perfect tool of its kind we have ever offered; simple, strong, reliable and durable, holding one-half bushel, and complete with plow, coverer, roller and marker.

The Driving-Wheel, is twenty inches in diameter with a two-inch face, with an easy cam track on the inside of

the tire, which operates the agitator lever.

The Hopper, holds one-half bushel, and an oscillating feeding shelf covers the open bottom of the hopper, and by a quick reciprocating motion feeds the fertilizer evenly through a rear discharge mouth, which is regulated in size by a feed rod and an index at the top of handle. If the plow is to be run deep, it may not be best to fill the hopper more than The Index, is graduated, and is controlled by a brass thumb nut and slide. The tool is instantly thrown out of gear

The Index, is graduated, and is controlled by a brass future and sinds. The tool is instantly thrown out of gear by the feed rod.

What It Will Do. It will sow fertilizers evenly from 100 pounds to 100 pounds to the acre; with material in any reasonable condition, it will not clog; is galvanized, has no cogs, gears or stirring devices, and will give perfect satisfaction.

Peas. It sows peas in any quantity and with the greatest regularity.

Sowing in the Furrow. For this work the plow, coverer and marker are removed and the full hopper is used.

The above illustration represents the latest improvements in Seed Drills by Mr. A. H. Matthews, who has been engaged for more than twenty-one years in the manufacture of Garden Seed Drills.

It will be seen by the cut that the handles are now bolted to the frame of the machine, and can be fixed at any height. These drills have further been improved by the addition of a new Steel Dial Gauge and Shut-off Attachment.

This tool, already a standard, will now be found as nearly faultless as a full can be made. It has never been denied that as a Seed Drill the Mathews has no superior. The cardinal principles in its construction are used in every drill worth having now in the market, and the A. H. Matthews' Drill still has, what it has had for years, the most extended sale of any tool of its kind. A special feature of this Drill is the new Shut-off Attachment. This connects a small slide beneath the hopper by the chain and ring along the handle to the hand of the operator; by this the dropping of seed can be instantly stopped. By dropping the ring the seed spout is again opened.

Wheel Hoes are companion implements of the seed drill, indispensible to market gardeners, nurserymen and farmers, who use the hand seed drill or grow roots for stock or vegetables for market. By adopting the use of good wheel hoes, one can undertake the cultivation of double his usual acreage of hoed crops without fear of being caught in their cultivation. They should be used at the speed of a moderate walk, making a stroke at each step, except for very delicate work, when strokes but a few inches in length may be taken, averaging three or four to each step. Careful practice will enable any operator to become skillful in a short time, the chief rule being to watch the wheel or wheels only, keeping it or them at a proper distance from the row. The knives follow them accurately, and the whole operation in a short time becomes easy, rapid and pleasant.

proper distance from the row. The knives follow them accurately, and the whole operation in a short time becomes easy, rapid and pleasant.

The "Planet Jr." Double Wheel Hoe is a great favorite, especially for field work. It hoes both sides of the row at once at the speed of a moderate walk.

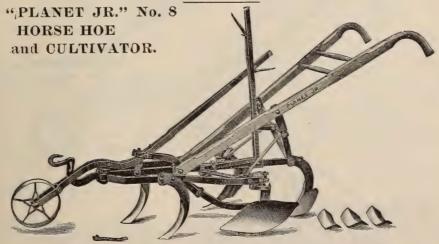

A wheel should be double, or at least capable of hoeing both sides of a row at one passage. Any inequalities can be accurately followed when straddling but one row; whilst between the two the tool must work the narrowest points, and therefore be quite too narrow for the wider parts; nor can a person watch two rows and work them as closely as one, even if planted accurately. But there are many plants, such as onions, celery, corn, etc., which grow too tall to be hoed both sides at once, and for the late tendings of such crops when close work is not required, the "Planet Jr." Double Wheel Hoe is arranged so that the wheels can be set close together, when it works perfectly as a single wheel hoe.

For 1897 we offer an improved Single Wheel Hoe, which we call No. 15. It is the latest and best in every particular, and we recommend it as very superior in many respects to any of the old styles. It has a great variety of tools, especially adapting the implement to a variety of crops, and work at different distances apart; and there is scarcely any garden culture it is not capable of, and which cannot be done with it more easily and better than with older patterns.

"PLANET JR." SINGLE WHEEL HOE, CULTIVATOR, RAKE and PLOW, 1896 PATTERN.

PRICE, Complete, - - Plain (hoes only,

Price, complete, \$8.00 Less depth regulator (order as No. 7), \$7.50.

The Frame is longer than usual and about 1½ inches higher, making a tool that will not clog easily.

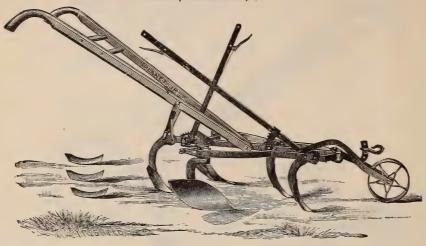

The Standards are formed up hollow, with round throats of stiff steel; they polish quickly and free themselves readily from obstructions, and they clasp the frame and strengthen it.

The Depth is under perfect control by means of a new lever wheel, and the new patented depth regulator, which are moved instantly in unison by a single lever, making exact work, steadying the machine, and relieving the operator.

The Expander. This is an entirely new pattern, superior to all other forms; exceedingly strong, simple, accurate and positive in all positions.

Handle and Braces. These are also absolutely new, and the most effective and stiffest combination known, at once making the tool rigid, yet allowing every adjustment of handles in height and sidewise.

THE "PLANET JR." NO. 6 HORSE HOE AND CULTIVATOR. PRICE, COMPLETE, \$7.25.

To The Lever Expander, which we first brought out in the season of 1890, has worked a revolution in this class of goods, for the advantages of being able to open or close the machine instantly, even while in motion.

For 1897 the frame of the machine is made extra long to avoid clogging in narrow rows, and the standards are made of steel, of an extra height, and with a round throat so that they will soour with use, and not drag the weeds along, and this makes the machine very light draft. Each machine is supplied with five cultivator plates, two side hoes and one shovel plate. The cultivator plates are reversible, and of such shape that among weeds or wire grass they will do as much work at one passage as the old style tooth did at two. The side hoes are extra wide (six and a half inches), can be changed from time to time or turned upside down and worn out on both edges.

The machine for 1897 is better than ever before. Last year, for the first time we supplied this machine with a very convenient Lever Wheel, which is well shown in the cut; it may be raised and lowered a little at a time in AN INSTANT AND WHILE IN MOTION; indispensible for all particular work, and a convenience that cannot easily be overestimated.

THE " PLANET JR." NO. 5. HORSE HOE AND CULTIVATOR.

PRICE, with Wheel, \$6.75. Without Wheel, \$6.00.

It is identical with the No. 6 Horse Hoe, except that it has a boiled star wheel instead of one operated by a convenient lever. The slight difference in price in favor of No. 5 will recommend it to some, though an increasing majority appreciate the great convenience of the lever wheel, and consider that it saves the trilling difference in cost almost every day it is in use. It is always convenient.

"PLANET JR." TWELVE-TOOTH HARROW, CULTIVATOR AND PULVERIZER.

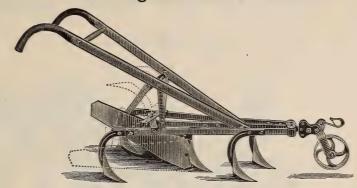

PRICE, plain, . . . \$5.40 with wheel, 6.65 complete, . 8 00

This thorough working and convenient tool has rapidly grown in favor among strawberry growers, market gardeners, truckers and farmers. This is because the twelve chisel-shape teeth do such thorough work, without throwing earth on small plants, and because the tool is so convenient, durable

because the tool is so convenient, durable and strong. It is invaluable in narrow rows and delicate work in market gardens.

But, for 1897, it is enough better than ever to warrant special praise. It is now made with our improved handle braces, which so stiffen the frame and handles as to make it seem twice as strong as ever, while the handles not only change in height to suit everybody, but also sidewise; and the expander is of the latest improved pattern, the same as upon No. 8 Horse Hoe, which works with perfect ease, yet holds the tool thoroughly rigid.

New England Horse Hoe.

Although introduced to Eastern farmers but a few seasons since, this Cultivator has sprung at once into rapid and

Although introduced to Eastern farmers but a new seasous since, this controlled well deserved popularity.

As shown in the above cut, it consists of a cultivator with two broad hilling wings attached, and a strong iron frame hat cannot be injured by exposure to the weather, or liable to breakage in hard soils.

When wanted as a cultivator, the hilling wings can instantly be detached and hung on the rod that passes through the handless, by simply removing three thumb nuts, then lowering the two teeth which have been previously pushed upwards on top of the frame, and fastening them securely in their places, it becomes a good, thorough pulverizing cultivator. By such an arrangement all risk of mislaid parts is entirely avoided. We confidently recommend this implement to all desirous of a good, strong, serviceable machine, well adapted for use in all kinds of soil.

WITH THE NEW PATENT ADJUSTING LEVER ATTACHMENT.

This is one of the most durable implements of its class on the market. Has Steel Frame and Standards throughout, and tempered crucible steel plates which combine strength, durability and lightness. The price is lower than any other first-class machine on the market.

DIAMOND TOOTH CULTIVATOR.

This is the most complete and perfect tool of the kind on the market, combining as it does the Field Cultivator and superb Garden Harrow and Pulverizer. It has fourteen % x % steel diamond teeth, drawn to a cutting edge on one end By a very simple device the slant of the teeth can be changed so that the tool can be made a perfect smoothing Harrow. It is especially adapted for getting out dog grass and heavy matted root weeds. Greatly improved for this season, having a wheel and expanding lever.

The Worcester New Model Buckeye

THE GOOD POINTS OF THE BUCKEYE.

The success of The Buckeye has been largely due to its Simplicity. It has fewer parts and less complications and is therefore less liable to get out of order.

In Efficiency it has no equal. Its fewer single parts and its less complicated combinations make it easy to be understood and handled, and adapt it to the widest variety of field work. Wherever any other machine can work The Buckeye can work, and work well, and in many rough fields The Buckeye is the only machine that can work at all,

THE BUCKEVE has always been popular for its DURABILITY. The mechanical principles on which its general designs rest, were proved correct and desirable many years ago and these are unchanged.

QUALITY has never been sacrificed to cheapness in building THE BUCKEYE, but while its cost has always been kept at a moderate point, its quality has not deteriorated. Every change has been an improvement, either in SIMPLICITY EFFICIENCY, or DURABILITY, and our patrons may be sure of THE BUCKEYE as well made, and of honest stock at every point.

It requires fewer repairs. Duplicate parts can be quickly and surely procured at convenient points. No loss of time in the hay field for repairs. The only machine with the Double-hinge Floating Finger Bar, which gives a flexibility like that of the combination of shoulder and elbow joint. The only machine in which the bar folds flat across the frame, making it as portable as a wagon. The only machine which has the patented Self-Oiling Pitman Box. It has fewer oilholes and bearings than any other machine. It is the only machine which can be worked with one horse with ease. Its average life is double that of others. It is the only machine that can present all the above claims as genuine.

Important changes in the INSIDE SHOE are among the improvements which were universally approved last year. By the use of malleable iron its weight is reduced, while its strength is increased.

The new lever adds greatly to the easy operation of the machine. By the introduction of a spring on the lever the cutter-bar is lifted with about half the former effort, and holds it at any elevation with ease and certainty.

This year we offer The Buckeye perfected up to the latest demands, and with more points in its favor than can be found in any other mower.

Our newest model is the CHAIN GEAR WORCESTER ONE-HORSE BUCKEYE, which cuts a swath of four feet. We offered it last year for the first time. It is bound to be a favorite, as it has all the qualities of the Standard Gear One-Horse combined with the special advantages of our celebrated Chain Gear Worcester Buckeyes.

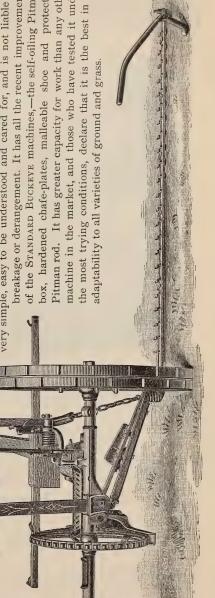

We are also offering this year a Five Foot Chain Gear Worcester Buckeye, for which we believe there is a very urgent demand. This, with the new One-Horse Chain Gear mower, makes altogether three chain gear machines for this year.

For great capacity, easy running and simple construction, there are absolutely no other mowers on the market which can approach the Chain Gear Worcester Buckeye Mowers. They will do more work in a day than any other mower of equal size and draft.

The New Six-Foot Mower

The gradual development and perfection of New England agriculture made a corresponding demand for improvement upon those who whose One and Two-horse New Model Buckeye machines are so entirely new machine, with a six-foot wood cutter bar, which has A demand has thus arisen for a mowing machine of greater capacity, and of more and economical work than the standard sizes. To meet it the Richardson Manufacturing Company, thoroughly endorsed by New England farmers, have perfected already been received with remarkable favor. supply its implements.

machine in the market, and those who have tested it under ing the power. It has but one pair of gears, and is driven with a the performance of most excellent work. The new arrangement is very simple, easy to be understood and cared for, and is not liable to the most trying conditions, declare that it is the best in its The six-foot machine differs from all others in the method of applysprocket-chain-gearing, which results in a positive and even action and breakage or derangement. It has all the recent improvements of the Standard Buckeye machines,—the self-oiling Pitman Pitman rod. It has greater capacity for work than any other box, hardened chafe-plates, malleable shoe and protected

Bullard's Improved Hay Tedder.

This Tedder has a fork outside each wheel, the distance between the wheels is much lessened, and the Tedder much easier handled by a light horse. Also the grass passed over by the wheel is picked up and thoroughly shaken, leaving no wheel tracks. This is over by the wheel is picked up and thoroughly shaken, leaving no wheel tracks. This is a patented arrangement, and can be found in no other Tedder.

An excellent arrangement of the hand lever for throwing the Tedder in or out of

gear without leaving the seat.

High action which stirs the grass more, causing it to dry quickly and more even.

It is thoroughly constructed with strong frame and wheels, nicely painted, and has the strongest crank shaft of any in the market. All bearings and boxes are nicely fitted. Cranks and all other parts are interchangeable.

Bear in mind that this is the oldest and only Tedder that has proved satisfactory after years of service, and every other Fork Arm Tedder now built is but an imitation. Also,

that there are more Bullard Tedders in use than all other Tedders combined.

HORSE HAY FORKS.

We carry in this line all the carefully tested and improved implements of to-day. Prominent among them you will find the well-known Palmer, Double and Triple Grapple, and Nellis' Harpoon. Call for descriptive circulars.

Myers' Force and Lift Pumps.

A favorite and reliable Anti-Freezing Pump. These pumps are equipped with an improved Glass Valve seat. Patent Expanding Plunger Buckle, and adjustable Base Plate. The Air Chamber is much larger than in any other Pump, causing it to throw the most even flow of water.

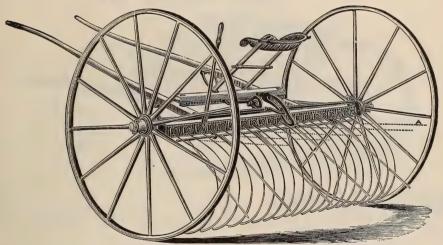

THE YANKEE HORSE RAKE.

Some of the Leading Points of Superior Excellence Found in The Yankee Horse Rake.

Simplicity of construction and facility of management. Adaptability to any and all conditions of surface and crops. Operated by the power of the horse and the driver's feet. The rake head is hung so as to balance the teeth. Teeth running level with the ground at their points. Has more teeth (which are hung nearer together) than any other rakes. All the teeth inserted and removed in less than two minutes' time, without disturbing any bolts. Each tooth independent and supplied with a yielding spring that will permit the tooth to pass safely over any obstruction that the axle will pass over.

Don't buy till you see the "Yankee." Always victorious in every public field trial.

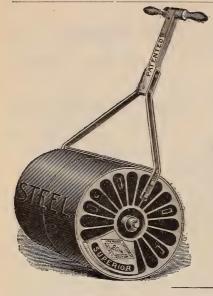

THE CHAMPION RAKE.

It has a patent tooth to prevent scratching. It has no springs to get out of order. It runs backward as well as forward. It has no jar on the thills in dumping. Its thills work as freely as those on a carriage. It will not scratch up fine seeding in the harvest field. It will run over trash lying on the ground, and leave it there. It can be held down to make very large windrows, or bunch them up. It is very easy to keep up the teeth after going over a windrow. It packs the windrow, leaving it in good shape for rolling up or pitching. It can take the heaviest grass that grows, as soon as cut.

BALDWIN FODDER AND ENSILAGE CUTTER.

In presenting the Baldwin Cutters to the public, we are not presenting a new and untried machine, but one that has been before the people for years, and proved itself the very best Fødder and Ensilage Cutter in the world. A few of the many improvements are the Patent Safety Balance Wheel for Power Cutters; Patent Link Feed; Self-Adjusting Iron Feed Rolls; small circle of knife head which makes the Baldwin Cutter run easier than any other machine made. The latest and greatest improvement is Beecher's Patent Rotary Cutter Head, with an entirely new arrangement for adjusting the knives to Ledger Blade by means of screws under the heel of the knife, so that each knife will have a perfect shearing cut, and at the same time have a solid bearing on the back; no packing of any kind being used in connection with this head. Every cutter fully warranted.

Steel Rollers

FOR THE

LAWN, GARDEN AND FIELD.

Made of the best material, all sizes and greatly improved, being

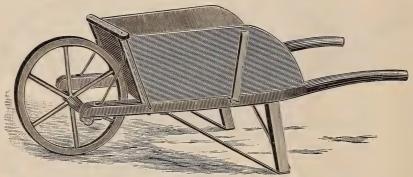

MADE OF STEEL

will not clog like the

STONE ROLLER.

A full assortment always on hand.

There is no article that has such general and hard usage as

the Wheelbarrow; consequently it is of the utmost importance to have only the best, as in the long run it proves the cheapest. Our Barrows are made of carefully selected hard woods, strongly throughout. We offer these Barrows in four sizes, each of which will be found perfectly adapted to the use for which it was intended.

STRAWBERRY CRATES AND BASKETS.

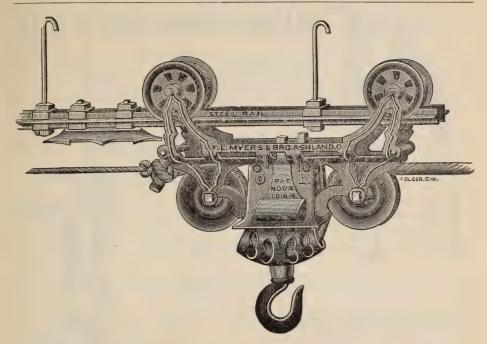

We have made special arrangements this year to meet the demands of the rapidly increasing fruit business in Rhode Island and vicinity, and will have on hand in their season, a large supply of Strawberry Crates of a most

improved pattern.

Berry Baskets and Boxes, and all kinds of Fruit Baskets and Boxes that are used in the business, at prices which we guarantee to be as low as any.

ASBESTOS CATERPILLAR BURNER.

An excellent device for burning insects' nests. Saturate with kerosene oil, light and hold under the caterpillars' nests, and pass quickly along the branches and around the trunk of the tree where the insects lodge. The great heat instantly destroys the insect.

STEEL TRACK REVERSIBLE CARRIER.

This Cut Shows Our New Reversible Carrier Adapted to Run on Patent T Rail Steel Track.

The Carrier is constructed with flange wheels and has the same reliable Double Lock, Tip and Stop which have given our Wood Track Reversible Carrier the extensive trade it now enjoys.

We shall carry a stock of the Meyers Wood Truck Carriers that were so popular with the trade last year.

The track is made of T steel rails, placed side by side, with space between, large enough to allow Hanging Hook to pass through. The joints are made alternately, whereby the full strength of one of the rails is retained where the other rail is spliced. The clamp used at the joint has two bolts which make the track as strong at this point as elsewhere. It is held together entire by a system of clamps. Any ordinary laborer with a monkey wrench can put it together. The Hanging Hooks serve also as clamps to hold the track together.

No RIVETING. It is a complete system and enables the dealer to supply the farmer with an outfit which can easily be put up. The Hanging Hooks should never be placed over four feet apart and at point where knocker is placed, they should be on every rafter over the load. Always place Stop as near under Hanging Hook as possible—same as shown in cut.

shown in cut.

HAND HAY RAKES.

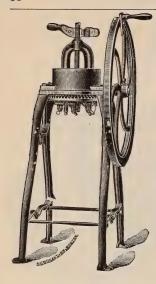

It is a conceded fact that there are but two or three manufacturers of first-class Hay Rakes in the United States. We have the exclusive sale of Rugg Mfg. Co.'s Rakes for this State and shall have a large stock of all grades, including the improved Wilcox Lawn Rake and Drag Rake, to supply the trade at reasonable prices.

HAYING TOOLS.

Our stock in this department will be found to be one of the largest in New England. We are only agents in Rhode Island for the Diamond Blade Solid Steel, Clipper and Razor Blade Scythes, manufactured by the American Axe and Tool Co. Our sales for these celebrated scythes have increased so much in the past two years that we double our orders for the coming season.

SNATHS.

We shall sell the New Patent Swing Socket Snaths manufactured by Derby & Ball (and sold only by us in Rhode Island). The straight Bend Snaths, first introduced by us eight years ago, have become the favorite with most of our trade. We shall have a large stock to offer at low prices.

MANN'S GREEN BONE CUTTER.

The most practical machines ever manufactured for cutting green bone, either by hand or power.

They are simple in construction, with nothing to get out of order, and easy to operate. They cut fast and fine.

The knives (made of the finest steel), can be taken out when dull, sharp-

ened, and replaced in a few minutes.

YOU CAN'T MAKE ANY MISTAKE if you buy a Mann's Bone Cutter.
They are strong and durable, and will last for years.

The Standard Green Bone Gutter.

No. 2. Power, Capacity 4 lbs. per Minute.

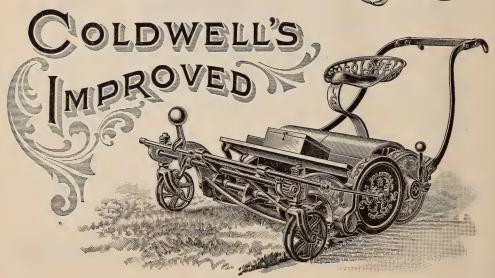

No. 4. Hand, Capacity 2 lbs. per Minute.

No. 3. Hand, Capacity 1 lb. per Minute.

No. 8. Hand, Capacity, 1-2 lb. per Minute.

All these machines are mechanically perfect, automatic feeding with automatic stop, easy running, durable, simple, perfect working, moderate cost machines-Try them in competition with any similar priced machines manufactured. machines have been improved this season and are all models in every particular.

We guarantee this to be the best Horse Lawn Mower ever made. It has side-draft attachment to enable the horse to walk on the cut grass only, and caster rollers which will not mark the lawn. We secure evenness of cut by an adjustment which raises or lowers the two sides at the same time by means of a simple lever movement; the same lever serves the purpose of raising the knives from the ground when driving over gravel walks or roads. The mowers are fitted up with steel shafting and composition split bushings, same as the hand mowers, and the same care is taken to have the workmanship perfect.

THE PHILADELPHIA LAWN MOWER.

DON'T BE DECEIVED.

Now we wish it distinctly understood that all Genuine Philadelphia Lawn Mowers have "Graham, Emlen & Passmore" cast on one wheel, and "Philadelphia Lawn Mower" on the other.

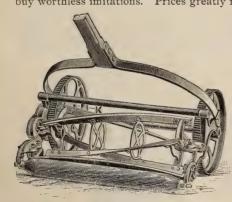

The market is flooded every year

with untried, worthless machines, having no merit or reputation, merely thrown together to sell. Such machines kill themselves in a season.

They come up and die like mushrooms, or else are disguised with a new name the second season, giving no satisfaction
to the trade or user. The genuine Philadelphia Mowers need no introduction. They have stood the test, still lead the market, and their reputation is known all over the civilized world.

We desire to call the special attention of the trade to "The Original Philadelphia Lawn Mower." The fact that recently a number of mowers in imitation of "The Philadelphia" have been put on the market, and while inferior in every respect have the same general appearance.

The genuine Philadelphia still leads the market. Leads in every good improvement. Best known. Most simple and durable. Self-sharpening and easiest kept in order. Don't buy worthless imitations. Prices greatly reduced for 1897.

Philadelphia Lawn Mower.

STYLE A.

Malleable Steel Wheels and Frame. Best Possible Construction.

High Wheels-Large Wiper.

LESS WEIGHT

Than the Ordinary Low

Wheel Mowers-Noiseless.

Do not buy a Lawn Mower until you examine

THE VICTORIA LAWN MOWER.

POINTS OF EXCELLENCE.

In presenting this Lawn Mower, we invite attention to all the points of excellence.

First-class material used throughout.

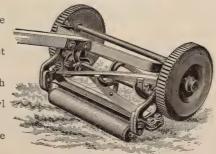

The greatest driving power, with the least amount of draft.

The highest speed reel.

The simplest adjustments in all bearings, with LOCK SCREW TENSION.

Positive force clutch ratched, with steel pawl with 5-16 inch catch.

Built thoroughly interchangeable. The only first-class Lawn Mower, leading the market with low prices.

EVERY MOWER WARRANTED.

PATENT STEEL BARBED FENCING. It turns all kinds of cattle. It is strong and durable. It is a protection to choice cattle against thieving as well as escape. It cannot be thrown down and

It turns all kinds of catile. It is strong and durable. It is a protection to choice cattle against thieving as well as escape. It cannot be thrown down and the field left open, as is often done with wood fences. In places of exposure to freshets it cannot be washed away. It is the cheapest of all fences in use. It saves the waste of ground which can be cultivated close to the line of the field. It shades no ground and does not encourage the shelter or growth of weeds. It is rapidly taking the place of wood when the two fences have been in use side by side. It is not on careful test, liable to injure stock. Accidents are not more common than from the old style of fence. It is everywhere overcoming the prejudice caused by the use of sharp barbs. We sell large quantities of this wire twisted without barbs.

Preston's Pat. Braided Barbless Fence Wire.

The Safest, Handsomest, Strongest, Cheapest, Best, No Barbs, Does Not Sag, Most Lasting, Does Not Break, Effective.

The only absolutely safe wire fencing manufactured, stock can see it and cannot get injured by it. Easily and quickly put up.

TRUSS AND CABLE FENCE WIRE.

This fencing is constructed upon well known mechanical principles. It is composed of six galvanized spring steel wires of superior quality, is about one and one-half inches wide and measures fourteen feet to the pound. Its strength is equal to the combined tensile strength of all the wires, and its construction is such as to allow the expansion and contraction of heat and cold without stretching. It combines all the desirable qualities of the simple cable with those of increased strength, width, and therefore visibility, resulting from a union of truss and cable, and costs less per rod than any strand of equal width in the market.

THE DELAVAL

"ALPHA" and "BABY"

CREAM SEPARATORS

Have revolutionized Creamery and Dairy Methods. They have been the "Keystone" of modern dairying, and have increased the productiveness of its interests fully one hundred millions of dollars a year.

The number in use now exceeds 100,000, or more than ten times that all imitating machines combined.

They were first and have always been kept best. They save \$10 per Cow per year over and above any other system. Satisfaction to the user and demonstrated superiority to everything else is the Universal condition of their sale.

Call or send for descriptive catalogue. "Free."

SHOVELS, FORKS AND HOES.

Our stock of shovels is the largest to be found in Rhode Island. We carry a full line of O. Ames & Son's manufacture. We are the sole agents for Rhode Island for Batchelor & Son's and French, Watson & Co.'s Manure and Hay Forks, and Ely Hoe and Fork Co.'s goods. Our prices will be found as low as any in the market.

AXES.

We have the exclusive sale in Rhode Island for the celebrated genuine Bradley, Bradley Pattern, and Solid Steel. We are general agents for the Sager, Eastern Star, and Forest Clipper. Our stock of handled Axes is large and complete. Tour sale of axes has largely increased in past few years.

ICE TOOLS.

We are the Rhode Island agents for Wılliam T. Wood & Co.'s celebrated Tools. They are the standard tools among all ice men. A good assortment can always be found in our stock. All tools fully warranted.

WOODEN WARE.

While we make Brooms, Tubs, Pails and Baskets a specialty, our stock of Wooden Ware of every description will be found full and complete, and our prices very low. We also carry a full stock of the staple kinds of Brushes, Clothes Wringers, Paper Pails, Churns, Butter Moulds, Butter Boxes, Butter Workers, Kegs, etc., etc.
A good line of Children's Wagons and Sleds always on hand. We also carry a full stock of the best make of Paper, Paper Bags and Twine.

PRATT'S FOOD FOR HORSES AND CATTLE.

What is it? A purely vegetable preparation, containing no mineral or other poison. It is not a medicine or condition powder. What it will do: Regulate the Powels, Blood and Digestive Organs, and therefore for Horses it will prevent ir digestion and loss of appetite. Cows will give richer milk and more of it. Young Pigs grow up free from disease, and fatten quickly; their meat will be juicy and tender. Pratt's food for Herses and Cattle is put up in 12, 25, 50 and 100 pound sacks.

PRATT'S POULTRY FOOD

Is an entirely different Food from the Horse and Cattle Food. It is put up in 250, and 600, packages, and 12 and 25 pound sacks, and is guaranteed to cure and prevent all diseases of the flock, and make hens lay regularly all seasons of

RUST'S HAVENS' CLIMAX CONDITION POWDERS.

Contains nothing harmful as a medicine, and is a general preventative for diseases of Fowls, Horses, Cattle, etc. Is very popular.

RUST'S EGG PRODUCER.

Think of it! You can feed Rust's Egg Producer every day for two or three weeks at a cost of one cent for each hen, and get surprising results.

CUT CLOVER.

FY: This supplies a long felt want in the line of a natural vegetable food, and is being used largely this season.

MICA CRYSTAL GRIT.

Far superior to Oyster Shells. Poultry Raisers have long desired to secure a sharp, clean grit of regular size, and superior quality. Mica Grit is prepared to meet this demand, and has been thoroughly tested.

SHERIDAN'S CONDITION POWDERS.

OF WORLD-WIDE REPUTATION.

This is strictly a medicine; not a feed.
Our Stock of Beef Scraps, Ground Oyster Shells, Ground Bone and Mixed Feed is always fresh. Wheat, Wheat
Screenings, Buckwheat, Barley and Oats, etc., for feeding always on hand.

POULTRY NETTING.

We have always on hand a large stock of the best makes, Clinton and Gilbert and Bennett's different widths from one to six feet, at the lowest market prices.

LEONARD'S HOUSEHOLD DISINFECTANT.

(KING OF THE AIR.)

Removes all foul odors, clean and agreeable to handle, used extensively everywhere. No market, hotel, etc., and families especially, should be without it.

SMALL FRUITS.

CULTURE.—On arrival of plants, unpack them at once, loosen STRAWBERRIES. the bunches, "heel" them in the ground or dip their roots in a "muddle," made by mixing earth in water until of the consistency of cream, and lay away in a cool, damp cellar, where they can neither dry nor freeze, until they can be planted in suitable weather. Do not leave in package and pour water over them, as this will surely cause the plants to heat and spoil. To grow large berries and plenty of them, fertilizers must be used freely. Unleached wood ashes is a specific fertilizer for the strawberry; ground bone is also excellent. Do not plant deep, but press the earth very firmly about the roots.

For hill culture plant in beds four feet wide, with alleys two feet between them. Plant in each bed three rows of plants fifteen inches apart, and the plants the same distance apart in the rows. For

the matted-row system plant in rows three feet apart, and the plants a foot apart in the rows.

Beder Wood. Large, good form and color, moderately firm, fair quality.

Bubach. (P.) Fruit large and handsome, roundish conical, bright scarlet, moderately firm. Charles Downing. Fruit large, conical, pretty, regular, scarlet; firm, juicy, sweet, rich.

Crescent. (P.) Medium to large, conical, bright scarlet.

Cumberland. Very large, ovate conical, regular and uniform; light red.

Gandy. Large and handsome, roundish conical; uniform in size and shape, bright scarlet; late.

Haverland. (P.) Large, long, light red; moderately firm: early.

Lovett Early. Large, round, conical, uniform, bright crimson; quality good.

Michel Early. Very early; fair quality.

Parker Earle. A splendid berry; uniformly large, regular, conical, scarlet-crimson.

Sharpless. One of the largest and best; very hardy.

CURRANTS. Currants and Gooseberries should be planted on good soil, which must be kept rich and well worked. Trim out the old wood as soon as it begins to decline and shorten all the young shoots, to keep the bushes in good shape. Sprinkle ashes around the roots occasionally, to keep the bores away. The currant worm may be destroyed by sprinkling the bushes with powdered white hellebore while they are wet with dew. Where it has been applied, the fruit should not be used without first being washed.

Cherry. Fruit large, bunch small; deep red; acid.

Fay's Prolific. Color rich red; as compared with the Cherry currant, Fay's Prolific is equal in size, better in flavor, contains less acid, and five times as prolific; and from its long peculiar stem, less expensive to pick.

La Versailles. A popular variety, bunch and berries large, bright crimson, fine, vigorous, and

productive.

Red Dutch. Medium size; in large bunches; the old and well-known currant of the garden; a profitable market variety.

White Grape. The best white variety; large, sweet and good; best for the table; a good bearer.

Plant in rows five to six feet apart, two to four feet apart in the row. RASPBERRIES. Cut the tops off within a few inches of the ground when planted. After the fruiting season, early in the spring, cut out all the old wood which bore the last crop of fruit. Pinch the vigorous young shoots several times during the summer. They will then grow stout enough to stand without staking.

Brandywine. Large; bright red; hardy and productive; an old variety, extensively grown for

market.

Cuthbert, or Queen of the Market. Large; firm; deep, rich crimson; of excellent quality; tall, strong and vigorous; perfectly hardy and very productive; succeeds well in almost all localities; ripens medium to late.

Gregg. A large black variety; fruit firm, of excellent quality and a good shipper.

Marlboro'. Of largest size, color a bright crimson, very firm.

Hansell. Medium; bright crimson; very firm, rich and of good quality; very early; desirable for market or home culture.

Doolittle's Improved. A popular black variety, excellent for market or home use.

Souhegan. Jet black, of medium size; a strong grower, very hardy and productive; the earliest of the Black Caps.

Plant in good soil, in rows five or six feet apart, and three or four BLACKBERRIES. feet apart in the row. After the fruiting season, or in early spring, cut out all the dead wood. Blackberries should be planted early, before the buds start. A good top dressing of stable manure, applied annually, will be conducive to large crops. Keep the ground clean.

Erie. This is a new berry of great promise, on account of ripening its entire crop at once and early. Berries medium or large size, black when ripe, firm, sweet, and of good quality.

Early Harvest. The berry is of fair size (not large); long form; a splendid shipper and of

good quality. Early, hardy and excessively prolific.

Kittatinny. Large, juicy, sweet and excellent; hardy and productive. Considered the best and most profitable late berry.

Snyder. Berries medium but of excellent quality; hardy, of strong growth and enormously productive; ripens early.

Glacier Refrigerator.

COLD DRY AIR.

We have this season, added to our already varied stock, (and taken the Agency for Rhode Island of the same,) a line of Refrigerators, suitable for general family use. We have found that there is a demand for Refrigerators of artistic designs, provided they are superlative in merit and of medium price. This demand we meet in the "Glacier." Each size has a special design of great beauty. There is extraordinary merit in the seven walls for insulation; also in the Glacier air-tight locks, and the Barrett movable flues for cleaning. We have them in many sizes and styles, and invite your inspection of the best Refrigerator on the market, design, material and price considered.

To Our Customers:

Don't fail when visiting us to look over our Harness Department, for in it you will be sure to find something adapted to your wants or needs. Our stock in this line embraces all kinds and all grades. Among them you will find the Buggy Harness, with the many styles of trimmings both machine and hand made either for light driving or for carryall work; the Express Harness in all the latest patterns and designs for delivery and milk wagons, also light teaming and farm work; Double Driving Harness for track or road work, built light, strong or durable;

the Team and Farm Harness for all kinds of heavy work in the field and on the road, in any style to suit.

All of which are guaranteed to be as represented, and are made of the best oak-tanned stock. For neatness and durability cannot be excelled.

The trimmings are the very best—Genuine rubber, Davis rubber, nickel or brass, as desired. We invite comparison of prices on same grade of goods.
